# Exhibit PP

Filed 07/08/2008 Case 1:97-cv-00550-SLR Document 1470-2 Page 5 of 53 CondenscIt<sup>TM</sup> Jury Trial - Volume D Tuesday, March 22, 2005 Page 830 Page 832 1 - VOLUME D IN THE UNITED STATES DISTRICT COURT 1 2 IN AND FOR THE DISTRICT OF DELAWARE 2 PROCEEDINGS 3 CORDIS CORPORATION, CIVIL ACTION Plaintiff 4 (Proceedings commenced at 9:20 a.m., and the 5 following occurred without the presence of the jury.) MEDTRONIC AVE, INC., BOSTON SCIENTIFIC CORPORATION and 6 7 SCIMED LIFE SYSTEMS, INC., NO. 97-550 (SLR) 7 MR. DISKANT: Good morning, your Honor. Defendants BOSTON SCIENTIFIC CORPORATION CIVIL ACTION 8 THE COURT: Good morning. and SCIMED LIFE SYSTEMS, INC., Plaintiffs 9 9 MR. DISKANT: I think we've reached a 10 10 substantial number of agreements. VS. 11 ETHICON, INC., CORDIS CORP. and JOHNSON & JOHNSON INTERVENTIONAL SYSTEMS CO., 11 First, the parties have agreed on an 12 12 instruction to request your Honor to give at the beginning 13 Defendants NO. 98-19 (5LR) 13 of the testimony. I will read it to you. I've written 14 it out as neatly as I can. I hope you can read it. The 14 15 CORDIS CORPORATION. CIVIL ACTION Plaintiff proposed curative instruction is: 16 16 In light of yesterday's testimony, I want to 17 MEDTRONIC AVE, INC., BOSTON SCIENTIFIC CORPORATION and 17 instruct you that there is only one infringement issue 18 SCIMED LIFE SYSTEMS, INC., 18 for you to decide in this case. That is the question NO. 98-197 (SLR) 19 Defendants 19 whether the NIR stent meets the substantially uniform 20 Wilmington, Delaware 20 thickness limitation of Claim 23 of the '762 patent. Tuesday, March 22, 2005 9:20 o'clock, a.m. 21 21 We've then agreed that Mr. Cavanaugh will 22 BEFORE: HONORABLE SUE L. ROBINSON, Chief Judge, and a jury 22 ask just one question on the subject of Dr. Richter, and 23 Valerie J. Gunning and 23 that question will be, in substance: 24 Leonard A. Dibbs, Official Court Reporters 24 Dr. Richter, you understand that the only 25 eent issue in this some is whather the NID stant

		25	infringement issue in this case is whether the NIR stent

# Tuesday, March 22, 2005

Page 834 Page 836 A purported comparison between a method claim 1 I don't think it's correct, and I don't think it's 1 and a device claim, which I think is -appropriate, and I don't think it's in the abstract. 2 THE COURT: I think I already have that one. I object to it. 3 3 MR. DISKANT: Okay. I think that's legally 4 4 THE COURT: All right. Well, I do have some incorrect and shouldn't be shown to the jury. 5 concern about an engineer talking about the difference I also understand that while they've abandoned between a method claim and a device claim. I mean, it's 6 any effort actually to show and review other claims with one thing to go through the language of the claim and the jury, they still want to say there are other claims say this is the device. It's another thing to illustrate in the patent that call for balloon. I don't think 9 this. 10 that's fair or correct. I think it's perfectly fair to 10 11 say Claim 23 doesn't say a balloon. I've got no quarrel 11 MR. DISKANT: Your Honor, it's just not in his 12 with that. When they start pointing to other claims, expert report. 12 Claim 44 requires a balloon in which another jury found 13 MR. BADENOCH: The demonstratives of none of they infringe. 14 the witnesses had their demonstratives in the expert report. 14 15 I don't think we should be going into other 15 THE COURT: I guess it's the analysis between claims in the patent. a method claim and device claim. 16 16 THE COURT: Mr. Badenoch? 17 17 MR. BADENOCH: Good morning, your Honor. 18 18 19 THE COURT: Good morning. 19 MR. BADENOCH: The idea of the demonstrative 20 20 that counsel handed up is to try to explain it to the 21 21 22 jury. The difference in the abstract now between a 22 product claim and a process claim, without saying at 23 23 24 that time, referring to any other Palmaz claim. In 24 other words, the slides we had that compared 23 to 51. 25

Page 835

1

25

23 not same balloon, 51 same balloon. We agree to take 2 that out. And the ones that said we compare Claim 23 to Claim 1 as a method in order to teach the jury that. Even though, of course, the jury does have the patent, I mean, we can't get away from it, and they have the 1665 and so on. 6

But we won't say that, but for the jury to understand our argument here, and this, of course, is key, the claim that is in suit is a product claim with structural limitations and we want to make that vivid to the jury in the abstract, and that's what that slide 12 is to do, is to say, look, the process -- the process, a process claim, not referring to anyone in particular, would have the steps of putting it on a balloon, inserting it and so on. 15

A product claim is this device, and I think that's completely fair and teaches the jury correctly what the issue is.

19 THE COURT: All right. Mr. Diskant? MR. DISKANT: Well, first, I don't think this 20 is correct. 21

16

And, secondly, I don't think it's in the 22 abstract. It obviously demonstrates the Palmaz device and we have a product claim for use in a particular method. This is a legal instruction from an engineer.

Page {

MR. BADENOCH: Your Honor, the problem with that, of course, is, particularly with the patent experts not testifying, Dr. Buller, you see, is giving testimony about the file history and the examiner is saying none, and things like that, and so we have to allow, obviously these experts at this point have studied these patents and file wrappers intensely with the attorneys on both sides, and so what we're basically doing is giving Dr. 10 Buller some leeway to discuss a few patent concepts. And we have to do the same thing with Mr. Snyder. 11 12 THE COURT: Right. But there's one thing, there's a difference between discussing and between illustrating and simplifying the illustrations to the point where it is not necessarily correct and it brings up issues that we more or less agree shouldn't be 17 brought up. So it's the demonstrative that I'm concerned 18

about, not what your -- not with your witness saying this claim covers a device. So I am happy to have your witness say that, but I am not comfortable with this demonstrative. 22

MR. BADENOCH: All right, your Honor. We 23 will take it out. 24

Are you saying, though, that that would be

                                                                                                                      Page 840
     something that we could use in the argument?
                                                                             THE COURT: So what is it what you want to say
  2
             THE COURT: Perhaps. I'm not saying that,
                                                                     in addition?
  3
     but perhaps.
                                                                  3
                                                                             MR. BADENOCH: And we need to explain that
  4
            MR. BADENOCH: All right. Thank you.
                                                                     they're important to the way the stent works, that this
  5
                                                                     is a key point how these U's stick out, how the welds
            Your Honor, just quickly, for the record, we
     want to move for JMOL of noninfringement because they
                                                                     are stronger. I mean, counsel said in the opening, he
  6
  7
     have put in no evidence that the NIR stent meets the
                                                                     basically said, Members of the jury, let me tell you
     substantially uniform thickness requirement where there's
  8
                                                                     their defense. It's so unbelievable, I can scarcely
     a proper measurement of thickness.
                                                                     understand it, but here's what they are saying.
 10
            Then quickly for the record, we did file a
                                                                 10
                                                                             He went on. They're saying this little U
 11
    motion yesterday. We believe what has happened here,
                                                                 11
                                                                     and this fly spec weld and so on.
     the Court, of course, ruled in limine that product-by-
                                                                             And we have to, of course, respond to that
                                                                 12
13
     product comparisons were relevant to validity, secondary
                                                                 13
                                                                     and say, no, this little fly spec weld is crucially
14
     considerations.
                                                                     important to the stent, and the way the U works, which
                                                                 14
15
            And then, what counsel did, starting with the
                                                                 15
                                                                     does come from the manufacturing method, is crucial.
16 AVE case, to say, Okay, we won't charge copying and we
                                                                             So all of that testimony is not intended to
                                                                 16
    won't charge that your stent is part of our commercial
                                                                 17
                                                                     be product by-product comparison at all. It's intended
     success. And, therefore, all of that stuff has to go
                                                                 18
                                                                     to address the infringement issues.
19
    out. That was their theory, and they did it in AVE and
                                                                            THE COURT: All right. Well, again, I,
                                                                 19
20
     then they did it again.
                                                                     frankly, thought that that was being covered yesterday.
                                                                 20
21
            The problem is, is that under a different
                                                                     It seemed like an awful lot of that was covered. But if
                                                                 21
22
    terminology, they really are arguing the same thing.
                                                                     you are telling me that you held back and that there was
                                                                 22
23
    What they are arguing is, Dr. Palmaz gave birth to the
                                                                     more, maybe I need to review Dr. Richter's direct, but
                                                                 23
24
    whole industry, that all of the stents, including yours
                                                                     I thought all of that has already been --
                                                                 24
    and AVE's and ACS's use a Palmaz ring. They have all
                                                                 25
                                                                            MR. BADENOCH: Not from this witness, your
                                                      Page 839
                                                                                                                      Page 841
    used the basic Palmaz invention. And that is accusing us
                                                                  1 Honor.
 2
    not just of infringement of Claim 23. That's accusing us
                                                                            THE COURT: All right. Before I forget, I've
 3 of taking and appropriating Palmaz's technology, and it's
                                                                     got two questions about jury instructions, because we're
    saying that all of the commercial success of these stents
                                                                     working on them to get them out.
 5
    are attributable to that.
                                                                            Number one, should we be referring to
                                                                  5
 6
            So our position is, your Honor, that opens
                                                                     defendants collectively as BSC or Boston Scientific?
    the door for us to discuss some of this product by-product
 7
                                                                  7
                                                                            MR. BADENOCH: I think, your Honor, if we
 8
    and superior properties and project --
                                                                    say Boston Scientific or B.S. -- the problem is all three
 9
            THE COURT: Olive. Well, Project Olive
                                                                 9
                                                                     are mentioned in the evidence.
10
    stays out. I, frankly, thought that what I was hearing
                                                                 10
                                                                            THE COURT: Right, but I only want one. I
    from Dr. Richter on the stand was about everything you
11
                                                                    mean, it's hard enough to read these instructions, so you
    just talked about. And, frankly, when I looked at this
                                                                    pick one and I will use it.
                                                                12
13 motion on my desk last night, I thought, Oh, well, it's
                                                                13
                                                                            You can confer and let me know.
    moot, because Dr. Richter has already talked about all
                                                                14
                                                                            MR. BADENOCH: Okay,
   of these things, except for this one project, which is
15
                                                                15
                                                                            THE COURT: But I don't want to be saying one
   still out.
16
                                                                    or two on three; I want to use one thing consistently
                                                                16
17
           So it seems to me as though --
                                                                17
                                                                    throughout the instructions.
18
           MR. BADENOCH: The only thing, your Honor,
                                                                18
                                                                            MR. BADENOCH: Fine, your Honor.
19
    what we tried to do with that was -- he explained the
                                                                19
                                                                            THE COURT: The other thing is, is, in fact,
    design process, but other than that, the details of
                                                                    are the defendants, in fact, pursuing an anticipation
                                                                20
    product features, he was addressing the U's and the
                                                                21
                                                                    defense?
22 welds, and that's a separate issue, because that really
                                                                22
                                                                            MR. BADENOCH: No, your Honor.
23 is core infringement here. They are arguing that these
                                                                23
                                                                            THE COURT: All right.
   things are trivial, no consequence. They are
                                                                            MR. BADENOCH: And what we are saying is that
                                                                24
```

manufacturing artifacts.

the Ersek device is so close that the differences on a

CondenseIt<sup>™</sup>

Tuesday, March 22, 2005

Page 842 Page 844 few points are trivial and obvious. 1 claim is. It's perfectly fine to say this claim is a THE COURT: All right. Well, I'm just -- in 2 2 device claim that doctors can review. It's perfectly terms of jury instructions, am I supposed to be fine to say this claim doesn't require a balloon. But contemplating an anticipation instruction or are we still 4 I don't think comparing it to other claims is with obviousness? 5 appropriate. MR. BADENOCH: I think the answer is 6 MR. BADENOCH: It's not a comparison, your 6 obviousness, your Honor. 7 Honor. It's only to put the thing in context. One 7 sentence. I'm sort of reminded, because I vividly THE COURT: All right. 8 MR. BADENOCH: We'll certainly check that and remember it in the Israel case and the very last 9 propose something if we think there's any reason for a 10 argument, when I had no chance to respond, I remember 10 difference. Mr. Diskant saying to the jury, they have lots of other THE COURT: All right. So do I need to review 12 claims, we only want you to hold this one invalid or 12 Dr. Richter's direct to see how much further it is I am something to this effect, or these five. 13 going to allow you all to go? 14 And, you know, that kind of thing clearly is MR. BADENOCH: No. your Honor. I think Dr. 15 unfair. But that's not what we're doing. 15 Richter's direct is finished, unless you were to change 16 This is only to show the jury the difference the ruling on Project Olive. But even that, I think, we between a product claim and a process claim, and we 17 simply say there are other claims in the patent that could put in with deposition. 18 It's mostly a case of just, I think we tried require a balloon. He makes one sentence. No visuals on 19 it, no specific comparisons. That was the plan. to, as succinctly as we could, put the list of quotes in 20 there where we think they opened the door. The only MR. DISKANT: This is just a reprise of 21 thing is we filed it yesterday, before the even more there's only one claim at issue theme, which your Honor 22 egregious quotes from yesterday afternoon. But --23 has ordered them to stop doing. I don't think it's fair. THE COURT: I'm having trouble hearing you, THE COURT: Well, I guess I'm still -- it's 24 24 not -- because I thought this was coming in through Dr. 25 Mr. Diskant, 25 Page 8 Page 843 MR. DISKANT: I'm sorry. I think this is just Richter, it did not occur to me that I needed to look at 2 a reprise of there's only one claim in issue theme, which 2 this that closely. I guess what I don't understand is your Honor has directed them not to do and which we've 3 how much further you want to go than what -- I mean, so asked for an instruction and final instructions on. I that's where you could be helpful to me by explaining don't think it's appropriate. to me, and maybe I need to refer to how far that MR. BADENOCH: I'm sorry, your Honor. The testimony went, to see where exactly you want the line 6

23 in.

24

25 away?

drawn past that. 7 MR. BADENOCH: I don't think we need to do more along that line, your Honor. The main thing would 10 be we believe we've opened the door to Project Olive here and that could come in, a short deposition testimony at the end of the day or tomorrow morning and, therefore, I don't think you need to review more testimony than that. THE COURT: All right. Thank you very much. 14 15 Anything else before we bring our jury in? MR. DISKANT: Just one issue. I wasn't sure I asked that Mr. Badenoch not be able to have his witness say there are other claims that have balloons and to focus his attention on the claims in suit. I don't think

fact that there's only one claim in issue, we're not going to make comparisons and we're not going to suggest anything speculative about the other claims, but the jury has a patent. It's got 50 claims in it. They are going to read it. We have to say the only claim for you to decide, the only claim in issue is Claim 23, just like we have to say the only issue for you to decide is substantially uniform thickness on infringement. We have to say that. Otherwise, the jury does not get what 15 16 the issue is. THE COURT: Well, I mean, that is the case, 17 there's only one claim and there's only one infringement issue in connection with that claim. It seems to me as 20 though that's a fair context to put this case in. 21 MR. BADENOCH: Thank you, your Honor. 22 THE COURT: All right. Let's bring our jury

Now, should I be giving this instruction right

I heard agreement. I would appreciate it if your Honor

I don't think it's appropriate to tell the

23 jury there are other claims in this patent that have

24 balloons, that draws their attention away from the

only correct analysis, which is what the scope of this

21

22

would rule on that.

CondenscIt<sup>™</sup>

Tuesday, March 22, 2005

Did you give that testimony?

- 2 A. I gave that testimony.
- 3 Q. Thank you.
- 4 A. I don't think that totally characterizes the reason.
- 5 Q. Okay. Nobody in 1985 knew that Palmaz was the
- 6 inventor of the balloon expandable stent, did they?
- 7 A. 1985?
- 8 Q. Before -- before he invented -- before --
- 9 A. Well, that depends on what they gathered from the
- 10 abstract.
- 11 Q. That's exactly right. You've made a bunch of
- 12 assumptions about what is in this little abstract; right?
- 13 A. I don't think so, no.
- 14 Q. Okay. We can agree, as Dr. Palmaz has written in
- 15 DX-17020 that Charles Dotter first described intravascular
- 16 stenting at a time when percutaneous angioplasty was not
- 17 even introduced. Unlike Dotter, most authors of original
- 18 stent concepts conceived these ideas -- let me pause on
- 19 the first sentence.
- 20 Dotter invented intravascular stenting at a
- 21 time when percutaneous angioplasty was not introduced.
- 22 As a consequence, Dotter couldn't be trying the, the
- 23 original Dotter anyway, could not have been trying to
- 24 improve on angioplasty. It didn't exist; right?
- 25 A. I see that, yes.

- Page 1026

  1 Q. He also doesn't say anything about a plastic
  - 2 deformation in the paragraph, does he?
  - 3 A. I think --
  - 4 Q. Doctor, please answer my question.
  - 5 A. He doesn't say explicitly.
  - 6 Q. Does he say anything about a wall surface of
  - 7 substantially uniform thickness? Yes or no?
  - 8 A. No.
  - 9 O. Yes or no?
  - 10 A. No. He describes a wall surface of not uniform
  - 11 thickness.
  - 12 Q. And he doesn't say anything about longitudinal
  - 13 slots, does he?
  - 14 A. Not directly. Again, if you --
  - 15 Q. Doctor --
  - 16 A. -- follow what he says, you'd see it.
  - 17 Q. He doesn't say -- it doesn't say anything about
  - 18 smooth surface; right? Does it?
  - 19 A. No.
  - 20 Q. Okay. Now, you've testified that -- you focused
  - 21 on one sentence here and said the dilatation and
  - 22 simultaneous placement and you said the Gianturco Z
  - 23 stent wasn't strong enough to do that.
  - Did I hear you give that testimony? Yes or
  - 25 no?

Page 1027

Page 1(

- 1 Q. Okay. And then Palmaz writes, unlike Dotter, most
- 2 authors of original stent concepts conceived these ideas
- 3 as a way to overcome the limitations of balloon
- 4 angioplasty.
- 5 And that's correct; right, sir?
- 6 A. Well, that's what Palmaz says. I'm not going to
- 7 quarrel with him.
- 8 Q. Okay. And what that means is that all the people
- 9 who were working on the self-expanding stents, the coil
- 10 stents, the spring stents, the Z stents, were all trying
- 11 to overcome the limitations of balloon angioplasty;
- 12 right?
- Is that true or not true or you don't know?
- 14 A. Palmaz says that was most people's intent in his
- 15 opinion, yes.
- 16 Q. Okay. And you gave some testimony that the Z
- 17 stent -- you focused on the -- actually, let me ask
- 18 first, we can agree that, although you interpreted the
- 19 paragraph, it doesn't say anything in the paragraph in
- 20 words about controllable expansion; right? Those words
- 21 aren't in the paragraph, are they?
- 22 A. No. I think -- I mean, I think if you really look
- 23 at this carefully and try to replicate what he describes.
- 24 you're going to come upon it. But he doesn't say it
- 25 explicitly.

- 1 A. I said -- what I said was that it wasn't strong
- 2 enough to break plaque without being so strong that it
- 3 would injure the vessel. That's what I said.
- 4 Q. Yes, because the truth is, Doctor, that the
- 5 expansile force of assessment stent design can be
- 6 increased dramatically simply by shortening the length
- 7 of the zig-zag pattern. Is that true or not? Please.
- 8 Can you answer?
- 9 A. That's true, but --
- 10 Q. Thank you,
- 11 A. -- it would then be inappropriate for use.
- 12 Q. That's exactly right. The question is you've got
- 13 to find the right expansile force so it explodes with
- 14 enough pressure to expand the vessel, but not so much
- 15 that it injuries the body. Isn't that the problem with
- 16 the Z stents? Yes or no?
- 17 A. I don't think the Z stents are used that way or
- 18 intended to be used that way.
- 19 Q. Beyond the Z stents, I didn't notice you talking
- 20 about Dotter's later memory metal coil, not that there's
- 21 prior art, which was simultaneously placed and expanded
- 22 to expand a lesion; isn't that true, sir?
- 23 A. I didn't bother with that because Dr. Palmaz said
- 24 that his device was stainless steel and there is no such
- 25 thing as stainless steel memory metal.

CondenseIt<sup>TM</sup>

Page 1032

Page 1030

1 Q. Okay. Let's just assume with me, just for purposes

- 2 of moving this along, that the description is a tad
- 3 obscure to the ordinary person. Okay?
- 4 A. What description is that?
- 5 Q. The description in the one paragraph in the program
- 6 for the radiology meeting. Okay?
- 7 A. Okay.
- 8 Q. Okay. Let's talk about Ersek.
- 9 You have read the Ersek patent more than once.
- 10 Is that fair?
- 11 A. I've read it through, sure.
- 12 O. Sure.
- We can agree that the Ersek design was a
- 14 fixation device for use during surgery; is that right?
- 15 A. Correct. His intended use was during surgery.
- 16 Q. Okay. And surgery, of course, is the procedure in
- 17 which the body cavity is opened and a conventional
- 18 operation ensues; right?
- 19 A. You've described conventional open surgery.
- 20 Q. Okay. And we can agree that that is exactly what
- 21 Dr. Palmaz was trying to avoid; correct?
- 22 A. That's correct.
- 23 Q. Okay. And, in particular, what Ersek was interested 23
- 24 in was replacing stitches. Is that fair?
- 25 A. Again, you're -- you're confusing process with

Page 1033

- 1 product, I think.
- 2 Q. Doctor, I'm asking you about the Ersek patent. Can
- 3 I ask you about that?
- 4 A. He's talking about making connection. That is
- 5 conventionally done with stitches.
- 6 Q. Okay. In stitching, a needle and thread goes
- 7 through the body tissue and the surgeon, during an open
- 8 procedure, stitches together whatever he is stitching
- 9 together; right?
- 10 A. Correct.
- 11 Q. And Ersek thought that that took a long time and
- 12 his fixation sleeve would be faster and better; right?
- 13 A. I think he only claims faster.
- 14 Q. Okay. You're right.
- And, of course, the Ersek fixation sleeve was
- 16 never used or made commercially; is that correct? Never
- 17 made commercially; is that true?
- 18 A. That's true. The --
- 19 Q. Thank you.
- 20 A. I don't know if the Palmaz version was ever
- 21 commercial. I don't think so.
- There are devices of this kind today.
- 23 Q. Well, what there are are surgical clip appliers
- 24 have replaced stitches in many uses; is that true?
- 25 A. That's different from this.

- 1 Q. Doctor, is it true that surgical clip appliers have
- 2 replaced stitches in many uses?
- 3 A. In some applications.
- 4 Q. Okay. Doctor, please let me ask my questions.
- 5 A. No
  - MR. DISKANT: Your Honor --
- 7 THE WITNESS: I need to change my answer
- 8 because a clip applier is different. Clip appliers are
- 9 not replacements for stitches ordinarily.
- 10 BY MR. DISKANT:
- 11 Q. A clip applier, a gun-like device has a row of
- 12 staples, and the surgeon, instead of stitching, uses the
- 13 clips that are between little jaws and the clip applier
- 14 goes squeeze and squeezes the staple shut during the
- 15 surgical procedure; isn't that how it works?
- 16 A. No. That's wrong. You're mixing up what surgeons
- 17 call clips and clip appliers, which are used to occlude
- 18 vessels that you've cut and just want to seal off.
- 19 You're confusing them with staplers, which are used to
- 20 join two pieces together.
- 21 Q. Okay. Let's agree on terminology, then. You want
- 22 to call these staples.
- 23 Surgical staplers are used instead of
- 24 stitching, a device in which little staples go between
- 25 the jaws and are clipped, staple things together or clip
- Page 1031
  - 1 them together as a replacement for sutures; correct?
  - 2 A. They kind of pinched them together instead of
  - 3 passing thread through.
  - 4 O. Okay.
  - 5 A. Correct.
  - 6 Q. And that's the art form in which Ersek is trying to
  - 7 come up with an idea; right? Replacing stitching; correct?
  - 8 True or false?
  - 9 A. Right. He's not making staples. He's replacing
  - 10 stitches
  - 11 Q. Okay. And you gave some testimony about expanded
  - 12 metal. And you put a brochure of some expanded metal
  - 13 into evidence. Do you remember that?
  - 14 A. Yes.
  - 15 Q. The truth is, there's all kinds of grades and kinds
  - 16 of expanded metal; right?
  - 17 A. Yes.
  - 18 Q. Okay. And so the important thing -- first of all,
  - 19 let's just make sure we all understand what expanded
  - 20 metal looks like and this is the kind of expanded metal
  - 21 you might get at the hardware store, but it's big so
  - 22 everyone can see it.
  - 23 PX-7686
  - Would you agree that this is a conventional;
  - 25 piece of expanded metal (handing exhibit to the witness)?

## CondenseIt<sup>™</sup>

## Tuesday, March 22, 2005

Page 1064

Page 1062 1 A. Yes. A stent made by the teachings of Ersek, yes.

- 2 Q. And so that we're clear, the experiment was the
- 3 idea of BSC lawyers, not you; right?
- 4 A. They thought it would be appropriate to test the
- 5 workability.
- 6 Q. Sure.
- 7 A. Yes.
- 8 Q. So one of counsel told you that this model has
- 9 been made and you went and observed it; right?
- 10 A. I observed the construction of the stents.
- 11 Q. Right. You didn't make it. The BSC engineers made
- 12 it; right?
- 13 A. I don't remember if I helped line those joints up.
- 14 Q. Okay. Maybe.
- 15 And the stents that you made based on
- 16 expanded metal, after they were made, they were crimped
- 17 on a balloon and flattened?
- 18 A. They were pushed down on a balloon and --
- 19 Q. Doctor, they were flattened; is that right? Yes
- 20 or no?
- 21 A. You're -- you're characterizing it as an intent.
- 22 What we found was that when we crimped it, they smashed
- 23 down.
- 24 Q. Doctor, Doctor, reduction on the mandrel resulted
- 25 in substantial flattening, particularly in the bond

- 1 no? It's not a trick question.
- 2 A. Yes.
- 3 Q. Thank you.
- 4 A. As a result of Dr. Andros' declaration that the
- 5 examiner is not at liberty to ignore.
- 6 Q. Right. And Dr. Andros' declaration was
- 7 substantially identical to the testimony of Dr. Buller
- 8 in this courtroom, wasn't it?
- 9 A. All I heard was Dr. Buller saying he agreed.
- 10 Q. Okay. Let's talk about what Ersek said he was
- 11 doing. One of the things, and the impact of what he said
- 12 he was doing on one of ordinary skill.
- 13 Ersek had essentially two specific disclosures
- 14 in his patent. We just looked at them. One was to
- 15 implant a heart valve; correct?
- 16 A. Right. One was the valve.
- 17 Q. And there was a design from 1970 or thereabouts;
- 18 right?
- 19 A. Right,
- 20 Q. And you are familiar in your professional life
- 21 with heart valves; right?
- 22 A. Yes.
- 23 Q. You've published on the subject; right?
- 24 A. A long time ago, yes.
- 25 Q. Some from the eighties and nineties. You published

## Page 1063

- 1 areas; correct?
- 2 A. Right.
- 3 Q. Thank you.
- 4 A. It resulted in flattening. It's not that it was
- 5 set out to flatten them.
- 6 Q. Of course, flattening is the opposite of what
- 7 Ersek talks about as preferred; right?
- 8 A. It's --
- 9 Q. Is it or is it not?
- 10 A. It's different from the preference.
- 11 Q. Okay. And, indeed, the Patent Office, when it
- 12 considered this question, included that the bridge of
- 13 the expanded metal has a thickness twice as great as
- 14 the strand. The outside of the Ersek device is a
- 15 multitude of these obstacles, making it rough rather
- 16 than smooth. And, further, making the outside of the
- 17 Ersek device smooth rather than rough would be contrary
- 18 to the teachings of Ersek, since the rough surface
- 19 formed by narrow outwardly projecting edges is intended
- 20 to imbed itself into the tissue wall upon expansion.
- 21 That's what the Patent Office concluded; is
- 22 that correct, sir?
- 23 A. This is -
- 24 Q. Doctor, Doctor, is that what the Patent Office, the
- 25 United States -- of the United States concluded? Yes or

- Page 1065 1 as recently as 1998, you've written on the dynamics of
- 2 prosthetic heart valves; right?
- 3 A. Yes. I helped somebody with instrumentation.
- Q. It's on your C.V.
- Now, after Ersek did his work, but before
- the Palmaz invention, there was a very significant event
- 7 in the heart valve industry that had a profound effect
- 8 on all implantable medical devices. The Shiley failure;
- 10 A. It had a big effect on how the FDA considers
- 11' medical devices.
- Q. Right. 12
- 13 And Dr. Palmaz has even written about it.
- 14 This is DX-15020.
- 15 What he wrote was the mechanical performance 16 of an implanted device must also be evaluated carefully
- under chronic exposure to a certain workload. Concern
- about the long-term endurance of modern cardiac valves.
- That's a heart valve; right? Cardiac valve means a
- 20 heart valve?
- 21 A. Yes.
- 22 Q. Concern over the long-term endurance of modern
- 23 cardiac valves underscores the importance of this
- 24 subject, he wrote. As the strut, as with the struts
- 25 of a cardiac valve, Dr. Palmaz wrote, a stent implanted

CondenseIt<sup>™</sup>

Page 1068

Page 1(

Page 1066 1 in an artery of a middle-aged patient must endure 1.5

2 to 2 billion pulsations and still perform without

3 failure.

You agree with that, don't you?

A. What --

6 Q. Doctor, do you agree with that or no? Yes or no?

7 A. I agree with it, but I understand that the valve

8 was made up of entirely different material than is

9 ever contemplated for a stent.

10 Q. Okay.

11 A. So I don't see the relevance.

12 Q. Okay.

13 A. I don't share Dr. Palmaz's reading --

14 Q. I understand, but you didn't invent the balloon

15 expandable stent either, did you? I withdraw that

16 question. I apologize.

Let's just talk about the Shiley story, so 17

18 the jury understands. You probably teach your students

19 about it, don't you?

20 A. I don't cover that.

21 Q. Someone else covers Shiley in your course

22 materials? Got to be taught; right?

23 A. We -- whether we do regulatory, we cover current

24 regulatory practices that people have to know about.

25 O. The Shiley heart valve was first introduced in the

1 website. Will you accept that?

2 A. Are you saying 400 died due to strut --

3 Q. Yes. Between '79 and '83. Now I'm talking about.

4 the entire 86,000 patients who had it during its entire

5 time on the market through 1986.

6 A. If you are representing there were 400 strut

7 fractures, I believe that.

8 Q. Okay. Another 200 survived, but only after

9 emergency open-heart surgery, they survived fractures.

10 Is that fair?

11 A. That's what would happen.

12 Q. You don't disagree with me that the Shiley heart

13 valve has killed more people than any other medical

14 device in history?

15 A. That may be true.

16 Q. Between 1979 and 1985 --

17 A. I -- I -- I don't know if that's true.

18 Q. Okay.

23

A. I think you'd have to qualify that by saying --

Q. Do you know Dr. Henry Peeler?

THE COURT: Mr. Diskant, you do need to let

22 the witness complete his response.

MR. DISKANT: I'm sorry.

24 THE WITNESS: That's a pretty broad

25 statement and, unfortunately, there are failures of

Page 1067

1 late 1970's and it was hailed as an advance in

2 mechanical heart prosthetics; is that right?

3 A. It may have been. It was one of many, became

4 relatively popular.

5 Q. It became notable when it killed more people than

6 any device in modern medical history. Is that fair?

7 A. Certain sizes of the valves, the largest two sizes,

8 occasionally broke. Unfortunately, by that time, there

9 were -- they were in a lot of people. When they failed,

10 a lot of people died.

11 Q. Basically, what you are talking about is inside

12 the beating heart there's a lot of stress on a

13 mechanical device; right?

14 A. Right. Shiley had chosen for the device for

15 particularly brittle material called Stellite, which

16 was subject to stress failure.

17 Q. Sure. And between 1979 and 1983, the struts that

18 held the valve in place fractured in 73 people, most of

19 whom died. Is that fair?

20 A. I don't remember the numbers, but that sounds --

21 Q. Okay. Of the 86,000 patients who received the

22 device during its total time on the market, 400 died.

23 Is that fair?

24 A. You said there were 76 strut fractures?

25 Q. No. Between '79 and '83. 400 comes from the FDA 25 A. Sounds right.

1 medical devices.

2 BY MR. DISKANT:

Q. Okay.

A. And if you are including ventilators that fail and

heart/lung machines and oxygenators and all of these

devices, I don't know. If you are saying implantable

7 medical devices, I think that would be true.

Q. Okay. That's fair.

Between 1979 and 1985, Shiley sent a series

of letters to the medical community about the fractures.

Is that fair?

12 A. I wasn't there, but I suppose that would have been

Q. And during those years, it was twice withdrawn for

15 fears about its safety and then put back on the market.

16 Is that true?

17 A. I don't recall that one way or the other.

18 Q. October 1985, Shiley finally ceased producing its

19 larger-sized valves. Is that fair?

20 A. That's 29 and 31.

21 Q. Yes. In 1986, the FDA finally demanded the removal

22 of the device from the market. Is that fair?

23 A. I will take your representation.

24 Q. Okay.

CondenseIt<sup>™</sup>

Tuesday, March 22, 2005

Page 1072 1 Q. Is it fair to say, Doctor, that the Shiley failure 1 A. Doesn't say anything. 2 had a profound effect on scientists who were thinking 2 Q. You're sure in 1985 it would have been obvious to 3 about putting metal in the coronary arteries in the 3 take Ersek and make it little and make it smooth and make mid-1980s? 4 it small and put it on a balloon and leave it in someone's Yes or no? 5 heart? Is that your testimony? 6 A. None of that is in Claim 23, so I didn't give an 6 7 A. No. It had a profound effect on people's design, 7 opinion on that. treatment of materials, selection of material, quality 8 Q. Okay. Lastly, sir, you were required to consider assurance, depth of testing that goes into regulatory, our so-called secondary factors; correct? but it had no effect whatsoever on contemplation of 10 A. Yes. putting metal in vessels. 11 Q. And you gave some testimony about that today; right? 12 12 A. Yes. 13 13 Q. At your deposition you testified you didn't recall 14 any secondary considerations that you had actually 14 15 15 reviewed. Is that fair? 16 A. That's not exactly true, no. 16 17 17 Q. And you didn't consider any commercial success or 18 any long-felt need or any recognition by the industry 18 19 or licenses at your deposition; is that fair? 19 A. I think those were aspects of secondary factors 20 that I said I had not considered, yes. 21 22 Q. Okay. Let me show you 7608, which I've marked 23 for identification (handing exhibit to the witness). And we're talking about Claim 23, the claim 24 24 25 that requires a tubular member with longitudinal slots Page 1071 Page 1073 1 and a first diameter for intraluminal delivery and a 1 2 A. (Continuing) Every other heart valve on the market second expandable and controllable diameter. Okay? 3 that was a mechanical valve had a metal rings. That's what my question is about. 4 Q. You remember, Doctor, that one of the people that 4 We can agree that Claim 23 describes the 5 Dr. Palmaz went to to try to interest them in his slotted Palmaz stent that Dr. Palmaz designed; correct? 6 tube balloon expandable stent was Shiley? A. It describes this tube, yes. 7 A. Right. A little off base for them, but, yeah. 7 Q. Describes the Palmaz stent that Dr. Palmaz 8 Q. I'm sorry. Shiley, February 1983, right in the described that was sold commercially by Johnson & Johnson. 9 middle of the problem. True? True? 10 A. Right. So he's asking a company kind of on its 10 A. Commercially, the tube was not sold by itself. It 11 heels to invest a lot of money. 11 was sold on a balloon in the hundreds, as far as I know. 12 Q. Right. Here's what Shiley said in 1983: It is 12 Q. Talking about the Palmaz stent that Johnson & 13 apparent that your concept provides a unique method for 13 Johnson packaged on a catheter in an angioplasty balloon 14 mechanically arresting the inherent elastic recoil of and sold in America as the Palmaz peripheral stent; 15 vessels subjected to PTA. But the disadvantage would be 15 right? 16 the necessity of leaving a prosthetic material in place 16 A. Yes. Stent 1 balloon. 17 following the procedure. We feel this disadvantage 17 Q. Did you consider in your obviousness analysis the 18 would outweigh the possible advantages of the advice and 18 report that the historic Palmaz stent was displayed at 19 have therefore decided not to pursue your concept, 19 the Smithsonian? 20 Shiley wrote; right? 20 A. No. It's a wonderful testament to somebody who 21 A. Well, yes. Their concern, as has been discussed, 21 worked so hard. 22 was that the device would thrombus. 22 Q. It's just a testament to his enthusiasm. Is that 23 Q. Sure. 23 fair? 24 A. Nothing to do with fracture. 24 A. Enthusiasm, hard work, refusal to give up, yeah. 25 Q. Okay. 25 Q. Okay. 22	***			21	judgment with respect to peremptory challenges, that is
23				22	challenges for which no reason need be given by counsel.
24				23	If any of you answer any question yes, please
25				24	stand up and, upon being recognized by the Court, state
. L_				25	your juror number.

Page 189

- 1 that I have no opinion about that because I am not
- 2 here to testify and not an expert on Claim 23.
- 3 Q. Okay. You also testified during your direct
- 4 testimony about the BX Velocity stent?
- 5 A. Yes.
- 6 Q. Which you and your family designed or helped
- 7 design?
- 8 A. Yes.
- 9 Q. Okay. And that was a very successful stent;
- 10 right?
- 11 A. Yes.
- 12 Q. And do you agree with me that the BX Velocity
- 13 stent is more flexible than the Palmaz/Schatz stent was?
- 14 A. I think that the BX Velocity is, you know, sort
- 15 of a third-generation stent. Stents got better. We all
- 16 used Dr. Palmaz's basic invention and, as smart people
- 17 hopefully will do, I'm not sure I'm one, but smart
- 18 people will improve upon what a pioneer does and make 18
- 19 them better. We're still not driving model T's. We're
- 20 driving better cars than that. But Henry Ford still
- 21 invented the internal combustion engine. I think we
- 22 should keep that in mind. People improve what Dr.
- 23 Palmaz invented, which is pioneering. That does not
- 24 mean that what he invented is not incredibly valuable
- 25 and actually, as I showed, that Palmaz slot is still

Page 190

- 1 in the BX Velocity, that critical building block. That
- 2 was the critical invention.
- 3 Q. I think you went a little beyond my question,
- 4 which is: Is the BX Velocity stent more --
- 5 A. Yes.
- 6 O. Is it more flexible and easier to deliver than the
- 7 Palmaz/Schatz stent?
- 8 A. Yes.
- 9 Q. And therefore, do you agree with me that at least
- 10 part of the success of the BX Velocity stent in the
- 11 marketplace had to do with the fact that it was more
- 12 flexible and easier to deliver than the Palmaz/Schatz?
- 13 A. Yes.
- 14 A. We improved upon the Palmaz/Schatz design, made
- 15 it more flexible. That allowed it to be more deliverable
- 16 and improved on its success.
- 17 Q. I want to talk about the Cipher stent next, which
- 18 as I understand it is a BX Velocity stent that's got a
- 19 drug coating on it?
- 20 A. That's correct.
- 21 Q. So the structure is the same? The structure of the
- 22 stent?
- 23 A. As the BX Velocity?
- 24 Q. Yes.
- 25 A. Yes.

- 1 Q. Okay. So I assume that it also is more flexible
- 2 and easier to deliver than the Palmaz/Schatz stent for
- 3 the same reasons you just gave?
- 4 A. Yes.
- 5 Q. Okay. And it has this additional feature, which is
- 6 the drug coating; correct?
- 7 A. Yes.
- 8 Q. And that, as I understand it, releases a drug after
- 9 the stent is implanted to prevent or retard the tissue
- 10 growth that causes restenosis?
- 11 A. Yes.
- 12 Q. Okay. And as a result, isn't it true that the
- 13 Cipher stent has much lower restenosis rates than the
- 14 bare metal BX Velocity stent?
- 15 A. Has much lower restenosis than any bare metal
- 16 stent in the history of the world. Really low and the
- 17 drug is very effective.
- 18 Q. So do you agree with me, then, that the success of
- 19 the Cipher stent is overwhelmingly due to the drug
- 0 coating which lowers restenosis?
- 21 A. There's no question that drug-eluting stents have
- 22 become very successful because, you know, it's probably
- 23 the next big stent. But in some ways continued
- 24 evolution, again, you know, now we have a V12 instead of
- 25 a V4 engine.

Page 192

- 1 It's still a better balloon expandable
- 2 stent. You know, we put a drug on it now. Some day
- 3 we'll do other things to make it even better. But it's
- 4 still all leveraging off of Dr. Palmaz's slotted design.
- 5 Q. But I think there was a yes in there, but don't
- 6 you -- do you agree with me that the success of the BX
- 7 Velocity I'm sorry. The success of the Cipher stent
- 8 as compared to the success of the BX Velocity stent has
- 9 to do with the reduced restenosis rates that you get
- 0 with the drug coating?
- 11 A. Yes, that has really helped with the success and
- 12 the widespread acceptance of that stent.
- 13 Q. Okay. And, again, Dr. Palmaz did not make that
- 14 contribution; correct?
- 15 A. That's correct.
- 16 Q. Okay. I think during your direct testimony that
- 17 you just testified that the standard of care today is a
- 18 balloon expandable stent. Is that what you testified to?
- 19 A. For the treatment of an obstructive or coronary
- 20 artery that's causing problems, the standard of care
- 21 today in my opinion is the treatment with not only a
- 22 stent, drug balloon expandable stent.
- 23 Q. Isn't the standard of care today really the use
- 24 of a drug-eluting balloon expandable stent?
- 25 A. My opinion, they're better than the bare metal

CondenseIt<sup>™</sup>

5

Thursday, March 17, 2005

Page 195

Page 190

Page 193

1 stents and that has become the standard of care, using

- 2 a balloon expandable drug-eluting stents.
- 3 Q. Okay. You also testified during your direct
- 4 testimony about the Stress and Benestent clinical trials
- 5 that were published in 1994?
- 6 A. Correct.
- Q. And I think you also testified about how before
- those results were published, the medical community was
- somewhat skeptical about the idea of stents?
- 10 A. Yes. I didn't say much about that during my
- 11 direct testimony, but I think that's true. That is,
- 12 there was a lot of skepticism about putting a piece of
- 13 metal inside an artery, a thought that it would cause a
- 14 very high rate of clotting that would be unacceptable
- 15 and that it would be too dangerous.
- 16 Q. So the skepticism was due to the fact that people
- 17 were concerned about leaving metal in an artery,
- 18 exposing it to the blood, and that would cause a blood
- 19 clot; right?
- 20 A. And that really came out of the self-expanding
- 21 stent trials that preceded Stress and Benestent with the
- 22 Snyder stent, which had a very high rate of stent
- 23 clotting. Once we put it on the balloon and expanded
- 24 it properly into the wall, the rate of clotting became
- acceptable. So once again, the concept of balloon
- Page 194 1 expansion of the stent not only improved the deployment,

balloon angioplasty?

- made bigger holes, prevented the reblockage, but also
- 3 improved the safety of the device, it appeared.
- Q. But weren't people skeptical about using balloon
- expandable stents, not just self-expanding stents, but
- balloon expandable stents in arteries?
- 7 A. They were until the Stress and Benestent trial
- proved that balloon expansion of a deformable piece of
- steel into the wall was a good idea. Until then, people
- did not think it was a good idea. And that in large part
- was due to very bad experiences with self-expanding stents.
- 12 Q. But Stress and Benestent did not overcome the
- 13 problem of thrombosis, did it?
- 14 A. We still have not overcome the problem of
- 15 thrombosis. The most recent drug-eluting trial stent
- 16 with thrombosis, 2 percent had clotted the Taxus stent.
- 17 Q. The problem with thrombosis is as bad today as it
- 18 was in 1994?
- 19 A. Almost as bad with the Taxus stent. Not as bad
- 20 with Johnson & Johnson.
- 21 Q. At the time because of this concern about
- 22 thrombosis, isn't it true that stent patients had to
- 23 receive very, very aggressive anticoagulation drugs?
- 24 A. They had to receive Coumadin and aspirin and
- 25 Persantin, typically. Those are three drugs. Coumadin

- 1 is given to about four million Americans every year.
- 2 It's one of the most widely prescribed drugs in the
- 3 United States. And, yes, you could call it aggressive.
- It was used for a month or two.
  - And that, with aspirin, which is continued
- indefinitely for everyone has coronary artery disease 6
- 7 essentially. So it was somewhat aggressive and some
- people had bleeding, but that combination was reasonably 8
- effective in reducing the stent clotting.
- 10 Q. But as a result of the drugs, I think you alluded
- 11 to this in your answer, didn't that cause a lot of
- bleeding and vascular complications in patients who 12
- received stents and patients who received balloon 13
- angioplasty didn't have to receive those drugs, so they 14
- 15 didn't suffer those complications?
- A. In the early days of stenting, back in 1994/95, 16
- 17 before we began to optimize some of those regimens, and
- 18 had better drugs and better regimens for deploying
- 19 stents, we had higher bleeding rates in the stent
- 20 patients than we had in balloon patients. Most of
- 21 those were minor bleeding in the leg but, yes, that
- 22 was one of the original problems with pretty aggressive
- 23 blood thinning at the time the stent was put in in 1994.
- Q. And as a result of that, didn't people who
- received stents at that time tend to have to stay in
- 1 the hospital longer than people who just received
- A. In general, they would stay in two or three days
- because they had to get on the Coumadin, and that takes
- about three days to really kick in for the blood thing
- of the Coumadin to work. So we'd usually keep them in
- the hospital for two or three days while the blood thing
- was coming into effect to make sure they were safe and
- that their stent stayed open.
- Q. And isn't it true that that problem was only 10
- solved after Stress and Benestent by Dr. Columbo?
- A. I would say that Dr. Columbo, who, you know, he
- 13 made the observation that using higher pressure to
- stretch the stent into the wall allowed you to have a
- lower risk of stent clotting, and also then better 15
- 16 drugs came along. The combination of those two things
- 17 allowed us to begin to back off on the blood thing and
- 18 discharge patients the next morning, which is what we
- 19 do today.
- 20 Q. And so Dr. Columbo's contribution was to show that
- 21 if you used high-pressure balloons to expand the stent
- 22 more fully into the wall, the thrombosis problem
- 23 wouldn't happen in the first place, so you didn't need to
- 24 use the harsh drugs; right?
- 25 A. He showed that it was important to stretch the

CondenseIt<sup>™</sup>

3 it?

5

6

8

9

10

they'll use it.

Thursday, March 17, 2005

Page 199

Page 200

Page 197

Palmaz stent into the wall firmly. That was an

- 2 important observation that Dr. Columbo made and it
- 3 helped us. We learned that when the stent wasn't
- totally touching the wall, that was one of the predictors
- of stent clotting, and whether we were taught by Dr.
- 6 Columbo that pushing it into the wall a little harder
- 7 made the stent clotting rate lower, we then were able
- to back off a little bit on the blood thinners and still
- have very good results.
- 10 Q. And once you backed off the blood thinners, the
- 11 vascular and bleeding complications were reduced and the
- 12 hospital stays got shorter; right?
- 13 A. Everything got better. The evolution, like most
- 14 medical technologies, is we evolved it. Smart people
- 15 made contributions in how to further improve the
- 16 treatment and we did. We got better at it, better at
- putting them in. We eventually got maybe a little bit
- 18 better stents, a little easier to deliver, as you
- 19 suggested.
- 20 And this was, don't forget, ten years ago we
- 21 had this, and medical progress is swift.
- 22 Q. And this advance and contribution that you just
- 23 described was Dr. Columbo's continue contribution, not
- 24 Dr. Palmaz's contribution; is that right?
- 25 A. He couldn't have done it without Dr. Palmaz's

So the doctors voted by using the Palmaz, having both available on the shelves. If they really

11 thought that the Cook stent was better, they would have

1 Q. Well, the other stent you're referring to, the one

2 by Gianturco, that wasn't approved for general use, was

4 A. It was approved for coronary use. It was supposed

to be used if you got a bad balloon result. Of course,

as already suggested, on label. Off label use does not

stop doctors if they think they have better advice.

- 12
- used it even though it was only approved for fixing bad
- balloon results, not for preventing restenosis. It 13
- 14 wasn't approved for preventing restenosis because it
- 15 didn't.
- 16 Q. But isn't it true that the Cook stent was only
- approved for a very narrow group of cases where you had 17
- a dissection or some other abrupt event whereas the
- Palmaz/Schatz was approved for general coronary use?
- A. I think I just said the Cook stent was approved 20
- for fixing a -- that tear we showed in the video. The 21
- Cook stent was approved for that. They did a study. I
- was in the study, to try to prove that it was better
- than a balloon to prevent reblockage and it wasn't. And 24
- 25 the doctors knew it. So they didn't use it, because the

Page 198

- stent because that was the one he used to do his studies.
- 2 But, yes, he made an observation with Dr. Palmaz's stent
- 3 and figured out some ways to put them in better than we
- 4 did in Stress and Benestent. You know, he improved upon
- 5 our ability to put the stents in properly.
- 6 Q. I want to go back to the Palmaz/Schatz stent when
- 7 it was launched in 1994. In 1994 until 1997, didn't
- 8 Cordis essentially have the coronary market to itself
- 9 because the Palmaz/Schatz stent was the only stent
- 10 approved for general use?
- 11 A. I don't remember the exact dates, but something
- 12 like that time frame. The only -- there was one other
- 13 stent on the market at the time, which was a coil
- 14 stent, which didn't have the features that Dr. Palmaz
- 15 invented, and that, the Cook stent had very bad
- 16 long-term results. So it really took that strong, you
- 17 know, expandable slot to give the kind of results that
- 18 we saw in Stress and Benestent.
- 19 So the other stent on the market from Cook,
- which was available, was pretty quickly recognized as
- 21 not having the beneficial effect that Dr. Palmaz's
- 22 stent had.
- 23 So because of that, even though there were
- 24 two stents in the market, everyone was pretty much using
- 25 the Palmaz, because it was the best stent.

- 1 Palmaz was the only one that improved the long-term
- 2 results.
- 3 So it was, even though it was only
- technically labeled for fixing torn vessels from balloons,
- as I already alluded to, almost every vessel is torn by
- balloons. You could have used it if you wanted, but it
- wasn't as good a stent.
- Q. Anyway, between '94 and '97, Cordis essentially
- has the market to itself and then other companies, like
- 10 Boston Scientific, introduce more flexible stents; right?
- A. They introduced -- they bought Medinol or did a 11
- marketing arrangement with Medinol and introduced, I 12
- 13 guess in 1998, the Nir stent.
- 14 Q. And other companies also introduced more flexible
- 15
- 16 A. Guidant introduced a stent called the Multi-Link
- stent, which was again sort of a second-generation stent 17
- that used Palmaz structures and was more flexible and 18
- 19 was very widely and quickly adopted. It was a second-
- 20 generation. They said, Hey, we can do better, make it
- 21 a little more flexible, maybe. We see Dr. Palmaz's
- piece in there. We can maybe tweak that, make it a
- 23 little better and sell a lot of stents. Very competitive
- 24 market.
- Q. And I think you just mentioned that the Nir stents.

## PROJECT OLIVE

This recommends an agreement with Cardimed in Tel Aviv, Israel for the rights to the NIR Stent that consists of a \$105MM license for worldwide marketing rights and an option to buy the patents and technology after a series of milestone payments of \$230MM have been paid within one year of the signing of this agreement making the total acquisition \$335MM. JJIS needs to proceed with this agreement immediately to prevent this very competitive and valuable stent design from being acquired by Boston Scientific or going public at a valuation between \$450-500MM. The following strategic business reasons drive the need for this acquisition:

- The NIR Stent design is a superior stent design for both coronary and peripheral applications and has the potential to substantially replace the PALMAZ and PALMAZ-SCHATZ Stent due to these unique features:
  - Flexible delivery, yet, very strong after deployment. The flexibility aspect of the NIR Stent is a substantial competitive advantage over the current PALMAZ and PALMAZ-SCHATZ Stents and is a feature which can potentially replace up to 50% of our current stent volume based on indicated physician preference and limited clinical results.
  - Accelerates JJIS expansion into two major stent segments in which we are unable to participate due to the inherent stiff design of the PALMAZ and PALMAZ-SCHATZ Stents:
    - Multi-vessel/extensive disease in patients. The unique flexibility and strength of the NIR Stent will increase stent penetration into this important and large segment of the stent market potential estimated to be over 100,000 procedures (\$160MM) per year worldwide. This will permit stenting of patients who would normally be sent to open heart surgery. This is a major opportunity for JJIS.

Cordis v. BSC CA No. 97-550 (SLR) D.Del. DXB 3168

a Johnson-Johnson company

40 TECHNOLOGY DRIVE • P.O. BOX 4917 • WARREN, NJ 07059 • TELEPHONE: 908-755-8300 • FAX: 908-412-3060

072947

- b. <3mm Vessels The NIR Stent's unique design is ideal for stenting <3mm vessels and will permit more rapid penetration of this untapped large segment estimated to be 200,000 procedures (\$320MM) per year worldwide.</p>
- 3. Longer Stent Design The NIR Stent design permits longer stents which will help reduce hospital/ procedure costs. JJIS needs longer, flexible stents to effectively compete against the multiple new stent products rapidly being introduced in Europe and other key markets. We cannot compete effectively, long term, with the current PALMAZ and PALMAZ-SCHATZ Stent design.
- 4. Sheathless Delivery The NIR Stent design will permit a sheathless delivery, hence, minimizing the invasive nature of the stent procedures. This will reduce the incidence of bleeding at the puncture site, shorten hospital stays and permit safer delivery of the stent.
- 5. <u>Higher Peripheral Penetration Rates</u> Due to the much easier/user friendly characteristics of the NIR Stent, we anticipate higher penetration rates into the current peripheral stent markets.
- 6. <u>Deflect Competitive Claims of Flexibility</u> All competitive stents have a strong flexibility claim versus the PALMAZ and PALMAZ-SCHATZ Stents. The NIR Stent will match or exceed the flexibility performance of competitors and provide superior strength following deployment.
- 7. Lower Manufacturing Costs The automated manufacturing and inspection method for the NIR Stent utilizes high-tech, integrated circuit technology and increases the precision of manufacturing. We anticipate it will lead to lower manufacturing costs.

In summary, this acquisition is necessary to perpetuate the stent franchise for Johnson & Johnson while protecting and building upon our worldwide leadership position.

Jury Trial - Volume B CondenseIt<sup>TM</sup> Friday, March 18, 2005 Page 271 1 - VOLUME B IN THE UNITED STATES DISTRICT COURT IN AND FOR THE DISTRICT OF DELAWARE 2 2 PROCEEDINGS CIVIL ACTION CORDIS CORPORATION. 3 Plaintiff (Proceedings commenced at 9:08 a.m.) 4 5 5 6 MEDTRONIC AVE, INC., BOSTON SCIENTIFIC CORPORATION and 6 THE COURT: I understand we have issues. SCIMED LIFE SYSTEMS, INC., Defendants 7 NO. 97-550 (51R) MR. BADENOCH: Good morning, your Honor. BOSTON SCIENTIFIC CORPORATION CIVIL ACTION 8 THE COURT: Good morning. and SCIMEO LIFE SYSTEMS, INC., Plaintiffs 9 MR. BADENOCH: To do this before the jury 10 comes in, I just -- I understand of course the Court's 10 ETHICON, INC., CORDIS CORP. ruling yesterday and we respect that, but I did for our 11 12 and JOHNSON & JOHNSON INTERVENTIONAL SYSTEMS CO., record want to offer the exhibits that I referred to 12 13 Defendants NO. 98-19 (SLR) and I understand counsel is going to object. 13 And for the record, I will just recite what 14 CORDIS CORPORATION. CIVIL ACTION Plaintiff those were. They are Plaintiff's Exhibit -- I had them 15 16 on a list here. It's Plaintiff's Exhibits 3642, 43, 44 17 MEDTRONIC AVE. INC., BOSTON and 45, Defendants' Exhibit 4507, Plaintiff's Exhibit 17 18 SCIENTIFIC CORPORATION and SCIMED LIFE SYSTEMS, INC., 18 1137 and 1126. 19 Defendants NO. 98-197 (SLR) 19 And then I have a proffer of one more 20 Wilmington, Delaware 20 exhibit, Defendants' Exhibit 4585, which is one more 21 Friday, March 18, 2005 9:08 o'clock, a.m. letter that I would have concluded that line with 21 22 BEFORE: HONORABLE SUE L. ROBINSON, Chief Judge, and a jury yesterday, although I understand the Court has asked 23 Valerie J. Gunning and us to stop that line of examination. So we respect 24 onard A. Dibbs, Official Court Reporters 25 that, but I just want to make the proffer on the 25 record. Page 270 Page 272 1 APPEARANCES: 1 THE COURT: All right. 2 ASHBY & GEDDES BY: STEVEN J. BALICK, ESQ. 2 MR. BADENOCH: And just for the record, our 3 position is that that does relate to credibility 4 -andconsistent with the Court's prior ruling because he gave 5 PATTERSON, BELKNAP, WEBB & TYLER LLP 5 a story of conception and we feel it's inconsistent with 6 BY: GREGORY L. DISKANT, ESQ., EUGENE M. GELERNTER, ESQ. 6 his prior --7 WILLIAM F. CAVANAUGH, IR., ESQ., MICHAEL TIMMONS, ESQ. and 7 THE COURT: Right. And I think the 8 SCOTT HOWARD, ESO. (New York, New York) discussion we had in our -- when we pretried this case 9 was that the defendants would be given some leeway, but 10 -andthere would be a line as always because conception is 11 JOHNSON & JOHNSON not at issue and I just -- in my belief, you crossed 12 BY: ERIC L HARRIS, ESQ. 12 that line. 13 Counsel for Cordis Corporation 13 But, in any event, I don't know what any of 14 YOUNG, CONAWAY, STARGATT & TAYLOR these exhibits are, so I suppose we need to go through 15 BY: JOSY W. INGERSOLL, ESQ. 16 15 them to see what, if anything, should be admitted or -and-17 16 17 MR. DISKANT: I object to all of them, your 18 KENYON & KENYON BY: GEORGE BADENOCH, ESQ., MARK CHAPMAN, ESQ. and Honor. They are basically a collection of documents. 19 WALTER HANLEY, ESO To the extent they had -- I would look at it this way. 20 (New York, New York) I think the examination made points that the documents 21 20 Counsel for Boston Scientific Corporation 22 make. I think it went way over the line. I think 23 adding the exhibits to that would compound the damage.

24

25

They are -- the documents themselves are utterly

irrelevant to any issue in the case. They're receipts from balloon catheters and they're grant applications

2	nongomur on oggi kuri a kar	2	A. Well, you heard a little bit about that yesterday.
3	ROBERT W. CROCE, having been	3	MR. HANLEY: Objection. No foundation.
4	duly sworn as a witness, was examined	4	THE COURT: Do you want to lay a foundation
5	and testified as follows	5	for the question, Mr. Harris?
6	THE COURT: You may proceed, Mr. Harris.	6	MR. HARRIS: Yes. I will do that, your
7	DIRECT EXAMINATION	7	Honor.
8	BY MR. HARRIS:	8	BY MR. HARRIS:
9	Q. Good morning, Mr. Croce.	9	Q. Prior to your involvement, your responsibility for
10	A. Good morning.	10	the Cordis stent business, were you aware of Johnson &
11	MR. HARRIS: Good morning, ladies and	11	Johnson's activities in the stent field?
12	gentlemen.	12	A. Yes. I was on the Board of Directors of Ethicon,
13	BY MR. HARRIS:	13	which is another Johnson & Johnson company, that signed
14	Q. By whom have you been employed?	14	the agreement with Dr. Palmaz, back in 1987.
15	A. I've been employed by Johnson & Johnson, and I	15	MR. HARRIS: May he proceed, your Honor?
16	retired January 1st of 2005, just a couple months ago.	16	THE COURT: Yes, you may.
17	Q. And how long had you worked there?	17	BY MR. HARRIS:
18		18	Q. So I guess the question let me repeat the
19	Q. Can you tell us a little bit about the business	19	question. How did Johnson & Johnson first become involved
20	of Johnson & Johnson?	20	in developing stents?
21	A. Yes. We're the largest health care company in	21	A. It started with the exclusive licensing agreement
22	the world and we kind of divide our businesses into	22	between Ethicon, which I've explained is on the
1	three different elements or segments. The one that	1	Johnson & Johnson company, and Dr. Palmaz's partnership,
1	most people are aware of is the consumer group, which	1	to develop his patented ideas into stent products,
1	·	1	basically.
<u> </u>	The state of the s	├	
١,	Page 310	1	Page 312
1	a large Pharmaceutical Group. They make drugs in the	1	Q. And did you enter into a licensing agreement with them?
2	cancer area, arthritis, and literally many, many other areas where serious illness is.		
3			A. Yes. It was an exclusive licensing agreement with
1 4	And then there's the Medical Device Group.	1	Dr. Palmaz's partnership.
5	And the devices range from sutures, which close up	5	Q. And when you say an exclusive licensing agreement,
6	J	0	what does that mean?
1	and, of course, stents and products that we use in the	/	A. Well, exclusive licensing would mean that if
8	stenting procedure.	8	someone was going to make or sell a product using Dr.
9	Q. And right prior to your retirement, what was	9	Palmaz's patented ideas, they would they need our
10	your job title and your job responsibilities?	10	permission. So it was basically or for use only.
111	A. I was company Group Chairman for Johnson & Johnson	11	Q. And did Cordis and J&J compensate Dr. Palmaz's
12	and I had worldwide responsibilities for Cordis. Of	12	company for the right to use his patent?
13	course, in 2004, I was transitioning slowly some of	13	A. Yes. We paid the partnership royalties, \$185
114	those responsibilities over to my replacement.	14	million, starting with the first commercial sale. And
15	Q. And who is Cordis?	15	that lasted up until 1999.
16	A. Cordis is a Johnson & Johnson company and one of	16	Q. 1999? What happened in 1999?
	•	17	
1		18	· · · · · · · · · · · · · · · · · · ·

23	Johnson & Johnson's stent business?	23	this licensing agreement with Dr. Palmaz's company in
24	A. That was in October of 1995.	24	1986, did they invest money in order to develop Dr.
	Q. How did Johnson & Johnson itself get involved in	ł	Palmaz's patented ideas?
20 21 22	the elements of Cordis is Cordis cardiology, and they make and sell products like stents and the other products that you saw in some of the illustrations yesterday with Dr. Fischell: The guide wires, catheters, balloons, stuff like that.  Q. And when did you first get responsibility for	18 19 20 21 22	<ul> <li>A. Well, we heard this several times. We bought the patents outright, and the licenses to them, for 200 million.</li> <li>Q. So who owns who owns the patents today?</li> <li>A. Cordis owns the patents today.</li> <li>Q. Okay. Now, after Johnson &amp; Johnson entered into</li> </ul>

Jury Trial - Volume B CondenseIt<sup>™</sup> Friday, March 18, 2005 Page 313 Page 315 1 A. Yes. We invested a large amount of money. It was 1 clinical trial, you usually have a success or not 2 a hundred million dollars. And to put that in 2 success, and this meant this one failed, so it was not 3 perspective, it's the largest amount of money that we successful. 4 had ever spent at this point on a medical device. And Q. All right. Now, let me direct your attention to 5 it was the largest amount of money ever spent on any the first sentence in the article. 6 medical device in the industry at that particular point. What are the authors saying here? 7 Q. Was it a risky investment? A. Well --8 A. Yes. It was a high risk, and I think you've heard MR. HANLEY: Objection, your Honor. The 9 many different things about it. But basically, it was document is in evidence and it speaks for it. 10 an unproven concept as far as the durability and safety 10 THE COURT: The objection is overruled. 11 and efficacy, and there was a tremendous amount of 11 MR. HANLEY: You don't need the witness to 12 skepticism, even in the cardiology community, at that 12 relate what's in here 13 time, if this was really going to work. 13 THE COURT: Overruled. 14 Q. Now, in order to sell stents in the United States, THE WITNESS: Basically, this was a product 14 15 did Johnson & Johnson need to get the approval of a --15 that had high hopes. The physicians were struggling 16 of the Government? with restenosis, so they wanted some solution. They had 17 A. Yes. Every medical device needs FDA approval or high expectations and, basically, what they found out, 18 Food & Drug Administration before you could, you know, that the product that was in this study actually made 19 make it available to physicians to use with patients. things worse, so it was very disappointing. 20 Q. During this time when you were seeking FDA approval BY MR. HARRIS: 21 and when Johnson & Johnson was investing all of this Q. And let me just make -- let me ask you: This was 22 money to develop the stent, was their publicity not the -- the test they were referring to in this 23 suggesting that stenting may not work? article was not a test of the Palmaz/Schatz, then, was 24 A. Yes. There was quite a bit of publicity, but one 24 it? 25 particular article stands out. It was the New York 25 A. No. As I already said, this was a coil stent. It Page 1 Page 314 1 Times article in 1991. was not the Palmaz/Schatz. 2 Q. Mr. Croce, could I ask you, I think you have it up O. Okay. 3 there, to take a look at what we've marked as Plaintiff's MR. HARRIS: Can we highlight that passage 4 Exhibit 186. a little further down, please? 5 BY MR. HARRIS: 5 A. Yes. It's the article I just mentioned. MR. HARRIS: Move Plaintiff's 186 into 6 Q. What are the authors saying here? Dr. Isner. 6 7 A. Yes. Dr. Isner and several other leading evidence, your Honor. 8 cardiologists had comments throughout the article. MR. HANLEY: No objection. 8 9 Q. All right. THE COURT: Thank you. 9 DEPUTY CLERK: So marked. 10 A. His was, is sobering, that's another way of 10 (Plaintiff's Exhibit No. 186 was received saying disappointed. But it wasn't what they had anticipated. 12 into evidence.) Q. Okay. Now, during this time period we're talking MR. HARRIS: Do you want to put it up, 13 about, what was the FDA telling Cordis and Johnson & 14 please? 15 Johnson? 15 BY MR. HARRIS: 16 Q. This is the article you were referring to? 16 A. The FDA has a different charge. They -- they 17 A. Yes, this is it.

18 Q. And what is the subject of this 1991 New York

19 Times article?

20 A. It basically is saying a new study came out on

21 stents which, by the way, was not the Palmaz/Schatz

22 stent, but failed in the clinical trial.

23 Q. And what does this headline, what does that

24 reflect?

25 A. It says failing grade. Usually, when you do a

embrace new technology. But they are responsible to

18 make sure that things that get out for widespread use

are safe and effective. And at that time, they were

probably even more skeptical than these -- and they

21 were insisting with our discussions with them that we

22 provide really hard clinical and scientific evidence

23 that these products were durable, that they could

24 stay in patients for a long time because they were

25 going to be there forever.

11 and I don't object to the rest of it.  12 MR. DISKANT: That's fine.  13 THE COURT: All right. Thank you.  14 MR. DISKANT: In that case, I don't mind.  15 Can we show 7236 first?  16 No. Why don't you put up 7236-A?  17 BY MR. DISKANT:  18 Q. Okay. Dr. Buller, what has been added to 7236?  19 A. All of this is is tabulated form of measurements of the wall thickness of the Ntx stent. I think if we could blow it up, this says wall thickness measured in inches. And this is a series of measurements of wall thickness, measured in inches. These are measuring thickness, measured in inches. These are measuring and thickness, measured in inches. They are tabulated.  1 various different measurements here. They are tabulated.  2 Boston Scientific calculated the average.  3 This was 0.0366, which was the average. All that I have had added to this is a measurement of the —if you like, the variation, which is sa incredibly uniform device.  3 This was 0.0366, which was the average as a standard deviation. And the standard deviation which is is in red here that I have had added is .00006, so that is six hundred thousandths of an inch variation.  4 A. They are absolutely tiny. The scale of the thing is sample. They are labulated.  5 So this is an incredibly uniform device.  10 MR, DISKANT: I offer 7236 and 7236-A.  11 Would you like me to address that, your  12 Honor?  13 THE COURT: I can barely hear you, Mr.  14 Diskant.  15 MR, BADENOCH: No objection to that one.  16 MR, BADENOCH: No objection to that one.  17 MR, BADENOCH: I don't actually object to his calculation. If we can have the same way with our demonstratives.  18 Q. Have you seen any intermal documents?  19 All Wheth enallysis you't be just presented about the bitchcess of the with the cours.  19 A. How the analysis you't be just presented about the bitchcess of the with discourt.  19 Chave you seen any intermal documents that disagree  with the analysis you't be just presented about the bitchcess are it with the cours.  19 Chave you seen any intermal documents th	Jur	y Trial - Volume B Cond	ense	Friday, March 18, 2005
2 chibit. We've calculated the standard deviation. Dr. 3 Buller has approved it. 4 M.B. BADENOCH: It assume it's going to 5 demonstrate some point that they are going to make. I 6 don't think that makes it a fact exhibit. I think that 7 makes it a demonstrative exhibit. 8 THE COURT: If you don't mind it being shown 9 as a demonstrative, we'll talk about admission later. 10 M.B. BADENOCH: I don't mind it being shown 10 and I don't object to the rest of it. 11 M.B. DISKANT: That's fine. 12 M.B. DISKANT: That's fine. 13 M.B. DISKANT: That's fine. 14 M.B. DISKANT: That's fine. 15 Can we show 7236 first? 16 No. Why don't you put up 7236-A? 17 BYMR. DISKANT: 18 Q. Okay. Dr. Buller, what has been added to 7236? 18 YMR. DISKANT: 19 Q. Okay. Dr. Buller, what has been added to 7236? 20 Q. Go abead. 21 various different measurements of could blow it up, this says wall thickness measured in inches. And this is a series of measurements of well thickness, measured in inches. These are measuring 21 various different measurements here. They are tabulated. 22 Boston Scientific alculated the average. 23 Q. Go abead. 24 various different measurements for the wall thickness of measurements of the wall thickness of measurements of the wall thickness of measurements of the wall thickness of measurements of the wall thickness of measurements of the wall thickness of measurements of the wall thickness to the Nits stent. I think if we could blow it up, this says wall thickness measured in inches. These are measuring 25 well thickness, measured in inches. These are measuring 26 of a bead. 27 various different measurements for the vall has the verage. 28 This was 0.0366, which was the average. 29 A. They are are Boston Scientific's own measurements of the vall thickness to the Nits and the Vall has very little documents, including one submitted to the Fab by Boston documents, including one submitted to the Fab by Boston documents, including one submitted to the Fab by Boston of the vall has very limited point of the welds. There are very		Page 441		Page 443
Buller has approved it.  MR. BADENOCH: I assume it's going to  demonstrate some point that they are going to make. I  denoth think that makes it a fact exhibit. I think that makes it a demonstrative, we'll talk about admission later, as a demonstrative, we'll talk about admission later, as a demonstrative, we'll talk about admission later, as a demonstrative, we'll talk about admission later, MR. ADENOCH: I don't mind it being shown as a demonstrative, we'll talk about admission later, MR. ADENOCH: I don't mind it being shown as a demonstrative, we'll talk about admission later, MR. ADENOCH: I don't mind it being shown as a demonstrative, we'll talk about admission later, MR. ADENOCH: I don't mind it being shown as a demonstrative, we'll talk about admission later, MR. ADENOCH: I then't fine. THE COURT: All right. Thank you.  A. A These are Boston Scientific so were measurements of Would blow it up, this says wall bischess measured in inches. And this is a series of measurements of wall thickness of the NR stent. I think if we completed the series of measurements of wall thickness of the NR stent. I think if we wall thickness of the NR stent. I think if we complete the think is a wall before the NR stent and inches. And this is a series of measurements of wall thickness of the NR stent. I think if we wall thickness of the NR stent. I think if we complete the think is a wall to the says wall bischess measured in inches. And this is a series of measurements of wall thickness of the NR stent. I think if we wall thickness of the NR stent. I think if we complete the think is a wall before the NR stent. I think if we complete the think is a wall think is a wall think is well as a wall think is a wall th	1		1	I'm happy:
MR. BADENOCH: Lassume it's going to 5 demonstrate some point that they are going to make. I 5 demonstrate some point that they are going to make. I 1 don't think that makes it a detendibit. I think that 1 makes it a demonstrative exhibit.  THE COURT: If you don't mind it being shown as a demonstrative, we'll talk about admission later.  MR. BADENOCH: I don't mind it being shown and I don't object to the rest of it.  MR. DISKANT: That's fine.  MR. DISKANT: That's fine.  NR. DISKANT: In that case, I don't mind.  Can we show 7236 first?  No. Why don't you put up 7236-A?  MR. DISKANT: In that case, I don't mind.  Can we show 7236 first?  No. Why don't you put up 7236-A?  MR. DISKANT: I think that we could be well thickness of the Nix stent. I think if we 20 could blow it up, this says wall thickness sensured in jocks. And this is a series of measurements of 25 wall thickness, measured in inches. These are measured in locks. And this is a manurement of the — if you like, 5 the variation, which is seem the beauth of the mind added to this is a measurement of the — if you like, 5 the variation, which is seem the beauth of the mind added to this is a measurement of the — if you like, 5 the variation, which is seem the firedly measured as a 5 standard deviation. And the standard deviation which is its is hard that the wall the wall which we had added to this is a measurement of the — if you like, 5 the variation, which is seem the firedly measured as a 6 standard deviation. And the standard deviation which is its is hard that the wall the wall which which is its in the manurement of the — if you like, 5 the variation, which is seem that firedly measured as a 6 standard deviation. And the standard deviation which is its is hard banded to do	2	exhibit. We've calculated the standard deviation. Dr.	2	THE COURT: All right. Thank you.
5 don't think that makes it a fact exhibit. Think that makes it a fact exhibit. Think that makes it a fact exhibit. Think that makes it a demonstrative exhibit.  7 makes it a demonstrative exhibit.  8 make BADENCCH: I foot don't mind it being shown as a demonstrative, we'll talk about admission later.  10 MR. BADENCCH: I don't mind it being shown as a demonstrative, we'll talk about admission later.  11 MR. BADENCCH: I don't mind it being shown as a demonstrative, we'll talk about admission later.  12 MR. BADENCCH: I don't mind it being shown as a demonstrative, we'll talk about admission later.  13 MR. BADENCCH: I don't mind it being shown as a demonstrative, we'll talk about admission later.  14 MR. BADENCCH: I don't mind it being shown as a demonstrative, we'll talk about admission later.  15 MR. BADENCCH: I don't mind it being shown as a demonstrative, we'll talk about admission later.  16 MR. BADENCCH: I don't mind it being shown as a demonstrative, we'll talk about admission later.  18 MR. DISKANT: In that case, I don't mind.  19 Can we show 7236 first?  19 YMR. DISKANT: In that case, I don't mind.  10 Can we show 7236 first?  10 Why don't you put up 7236-A?  11 Why M. DISKANT: In that case, I don't mind.  11 Can we show 7236 first?  12 Why M. DISKANT: In that case, I don't mind.  13 A Yes.  14 Q. Have you had an opportunity in the course of this with the wall has very little ovariation.  14 Q. Have you had an opportunity in the course of this with the wall has very little ovariation.  14 Q. Have you had an opportunity in the course of this with the wall surface.  15 W. M. DISKANT: In that take, I don't mind.  16 (a) Chap. DiskanT:  18 Q. Now, Dr. Buller, what has been added to 7236?  19 A. All of this is is tabulated form of measurements of wall thickness of the NR stant. I laink if we doubt the standard deviation which is in red here that I have bad added to wind the sandard deviation which is in red here that I have bad added is .000006, so that is six hundred thousandths of an inch variation.  12 MR.	3	Buller has approved it.	3	BY MR. DISKANT:
6 don't think that makes it a fact exhibit. I think that 7 makes it a demonstrative exhibit. 8 THE COURT: If you don't mind it being shown 9 as a demonstrative, we'll talk about admission later. 10 MR. BADENCH: I don't mind it being shown 11 and I don't object to the rest of it. 12 MR. DISKANT: That's fine. 13 THE COURT: All right. Thank you. 14 MR. DISKANT in that case, I don't mind. 15 Can we show 7236 first? 16 No. Why don't you put up 7236-A? 17 BY MR. DISKANT: 18 Q. Okay. Dr. Buller, what has been added to 7236? 19 Q. Nay. Dr. Buller, what has been added to 7236? 20 of leb wall thickness of the Nit stant. I think if we could blow it up, this says wall thickness measured in inches. These are measurements of wall thickness, measured in inches. These are measurements of wall thickness, measured in inches. These are measurements of wall thickness, measured in inches. These are measurements of wall thickness, measured in inches. These are measurements of wall thickness, measured in inches. These are measurements of wall thickness, measured in inches. These are measurements of wall thickness, measured in inches. These are measurements of wall thickness, measured in inches. These are measurements of wall thickness, measured in inches. These are measurements of wall thickness, measured in inches. These are measuring  Page 442  1 various different measurements here. They are tabulated. 2 Boston Scientific calculated the average. 3 This was 0.0366, which was the average. 4 A. These are Boston Scientific aclulated the average. 5 the variation, which is scientifically measured as a standard deviation. And the standard deviation which is in rect bere that I have had added to so, once of the wall was a series of measurements of the "if you like, the wall shift of variations in thicknesses of the wall was a series of measurements.  10 Various different measurements for the "if you like, the walls the walls through a lot of a couple of percent of the wall warriace.  11 THE COURT: I can barely hear you, Mr. 12 MR. BADENOCH	4	MR. BADENOCH: I assume it's going to	4	Q. Based on the measurements done by Boston
makes it a demonstrative exhibit.  THE COURT: If you don't mind it being shown as a demonstrative, we'll talk about admission later.  MR. BADENOCH: I don't mind it being shown and I don't object to the rest of it.  MR. DISKANT: That's fine.  THE COURT: All right. Thank you.  MR. DISKANT: That's fine.  THE COURT: All right. Thank you.  MR. DISKANT: That case, I don't mind.  Can we show 7236 first?  No. Why don't you put up 7236-A7  BY MR. DISKANT: That has been added to 7236?  A. All of this is is tabulated form of measurements of the wall thickness of the Nit stent. I think if we could blow it up, this says wall thickness measured in inches. These are measuring in liches. And this is a series of measurements of wall thickness, measured in inches. These are measuring to wall thickness, measured in inches. These are measuring to the variation, which is scientific alculated the average.  This was .00366, which was the average. All that I have had added to tuis is a measurement as a standard deviation. And the standard deviation which is in recher that I have had added is .00006, so that is in the one without the standard deviation. So this is an incredibly uniform. These measuring to available the rest of it.  MR. DISKANT: The table play in the course of this case to review Boston Scientific 's internal documents?  The view Boston Scientific 's internal documents?  A. Yes.  Q. Have you had en opportunity in the course of this case to review Boston Scientific, a suptainable count the wall surface?  Q. Have you had en opportunity in the course of this case to review Boston Scientific 's internal documents?  A. Yes.  Q. Have you had en opportunity in the course of this case to review Boston Scientific, aget a license to sell the NTR stent and case. I don't think if we cause of its will surface.  The Yelooked carefully through a lot of decuments?  A. No. I was out the vall barbace of its will surface.  Page 42  Various different measurements here. They are tabulated.  Boston Scientific calculated the average.  This wa	5	demonstrate some point that they are going to make. I	5	Scientific's engineers, the wall thickness the NIR
8 THE COURT: If you don't mind it being shown 9 as a demonstrative, we'll talk about admission later. 10 MR. ADENCH: I don't mind it being shown 11 and I don't object to the rest of it. 12 MR. DISKANT: That's fine. 13 THE COURT: All right. Thank you. 14 MR. DISKANT: in that case, I don't mind. 15 Can we show 7236 first? 16 No. Why don't you put up 7236-A? 17 BY MR. DISKANT: 18 Q. Okay. Dr. Buller, what has been added to 7236? 19 A. All of this is is tabulated form of measurements 20 of the wall thickness of the Nix stent. I think if we could blow it up, this says wall thickness measured in inches. And this is a series of measurements 21 Q. Go abead: 22 Q. Go abead: 23 Q. Go abead: 24 A. These are Boston Scientific's own measurements of wall thickness, measured in inches. These are measuring 25 wall thickness, measured in inches. These are measuring 26 wall thickness, measured in inches. These are measuring 27 In a warious different measurements here. They are tabulated. 28 Boston Scientific calculated the average. 29 This was .00366, which was the average. All that I have had added to this is a measurement of the wall surface. 20 MR. DISKANT: 1 offer 7236 and 7236-A. 21 Would you like me to address that, your 22 Money there that I have had added it of such so this is an incredibly uniform device. 30 MR. DISKANT: Let me just offer 7236, which is in red here that I have had added it of such so the such as a standard deviation. And the standard deviation which is in red here that I have had added it of such so the such as a standard deviation. There is an increase. I think again Boston is in red brew that have had added to such objection to that one. 30 MR. DISKANT: Let me just offer 7236, which is the one without the standard deviation. I will address the other one later with the court. 31 MR. DISKANT: Let me just offer 7236, which is the one without the standard deviation. I will address the other one later with the court. 31 MR. BADENOCH: 1 don't actually object to hits calculation if we can have the same way w	6	don't think that makes it a fact exhibit. I think that	6	stent, do you have an opinion as to whether its wall
9 as a demonstrative, we'll talk about admission later.  MR. BADENCH: I don't mind it being shown and I don't object to the rest of it.  MR. DISKANT: That's fine.  THE COURT: All right. Thank you.  MR. DISKANT: In that case, I don't mind.  Can we show 7236 first?  PYMR. DISKANT:  RO (Nay. Dr. Buller, what has been added to 7236?  A. All of this is is tabulated form of measurements of the wall thickness of the NRI stent. I think if we could blow it up, this says wall thickness measured in inches. And this is a series of measurements of wall thickness, measured in inches. These are measuring  Page 442  These are Boston Scientific's own measurements of wall thickness, measured in inches. These are measuring  Page 442  various different measurements here. They are tabulated. Boston Scientific calculated the average.  This was, 00366, which was the average. All that I have had added to this is a measurement of the —if you like, to the wait at the world you like me to address that, your  Honor?  THE COURT: I can barely hear you, Mr.  MR. DISKANT: Let me just offer 7236, which is the one without the standard deviation. And the standard deviation. Mr. Diskant.  MR. DISKANT: Let me just offer 7236, which is the one without the standard deviation. I will address the other one later with the court.  MR. DISKANT: Let me just offer 7236, which is the one without the standard deviation. All the standard deviation. All the standard deviation. All the standard deviation. All the standard deviation. All the standard deviation. All the standard deviation. All the standard deviation. All the standard deviation. All the standard deviation which is the one without the standard deviation. All the standard deviation which is the one without the standard deviation. All the standard deviation which is a micredibly uniform device.  MR. DISKANT: Let me just offer 7236, which is the one without the standard deviation. All the standard deviation which is the one without the standard deviation. All the standard deviation which is the one wi	7	makes it a demonstrative exhibit.	7	thickness is substantially uniform?
MR. BADENOCH: I don't mind it being shown and I don't object to the rest of it.  MR. DISKANT: That's fine. THE COURT: I dan't mind it being shown II don't object to the rest of it.  MR. DISKANT: In that case, I don't mind. Can we show 7236 first? No. Why don't you put up 7236-A? BY MR. DISKANT: No. Why don't you put up 7236-A? All of this is is tabulated form of measurements of the wall thickness of the Nits stent. I think if we could blow it up, this says wall thickness measured in could blow it up, this says wall thickness measured in inches. And this is a series of measurements of wall thickness, measured in inches. These are measuring  Various different measurements here. They are tabulated. Boston Scientific calculated the average. This was .00366, which was the average. All that I have had added to this is a measurement of the -if you like, the variation, which is seientifically measured as a standard deviation. And the standard deviation which is in red here that I have had added is .00006, so that is in red here that I have had added is .00006, so that is in mediated the substanded deviation. All the standard deviation which is in mediated the substandard deviation which is the mediated the substandard deviation which i	8	THE COURT: If you don't mind it being shown	8	A. Absolutely. It's substantially uniform. These
11 and I don't object to the rest of it.  12 MR. DISKANT: That's fine.  13 THE COURT: All right. Thank you.  14 MR. DISKANT: In that case, I don't mind.  15 Can we show 7236 first?  16 No. Why don't you put up 7236-A?  17 BY MR. DISKANT:  18 Q. Okay. Dr. Buller, what has been added to 7236?  19 A. All of this is is tabulated form of measurements of the wall thickness of the NR stent. I think if we could blow it up, this says wall thickness measured in inches. These are measuring of wall thickness, measured in inches. These are measuring or wall thickness, measured in inches. These are measuring or wall thickness, measured in inches. These are measuring and added to this is a measurements bere. They are tabulated.  1 various different measurements here. They are tabulated. Boston Scientific calculated the average. All that I have had added to this is a measurement of the —if you like, the variation, which is scientifically measured as a standard deviation. And the standard deviation which is an incredibly uniform device.  10 MR. DISKANT: I offer 7236 and 7236-A.  11 Would you like me to address that, your 14 Honor?  12 Honor?  13 THE COURT: I can barely hear you, Mr.  14 Diskant.  15 MR. DISKANT: Let me just offer 7236, which is the one without the standard deviation. I will address the other one later with the court.  16 MR. DISKANT: I offer 7236 and 7236-A.  17 MR. DISKANT: I offer 7236 and 7236-A.  18 Would you like me to address that, your 19 was presented about the intimated by a presented about the intimated by a presented about the intimated by a presented about the intimated by a presented about the intimated by a presented about the intimation of the welds of the welds in the same revery tiny is ignificant variation in wall thickness other than this yes gignificant variation in wall thickness other than this yes gignificant variation in wall thickness other than this yes gignificant variation in wall thinkness other than this yes gignificant variation in wall thinkness other than this yes gignificant va	9	as a demonstrative, we'll talk about admission later.	9	measurements clearly show that the wall has very little
12 MR, DISKANT: that's fine. 13 THE COURT: I can barely hear you. 14 MR, DISKANT: that case, I don't mind. 15 Can we show 7236 first? 16 No. Why don't you put up 7236-A? 17 MR, DISKANT: 18 Q. Okay. Dr. Buller, what has been added to 7236? 19 A. All of this is is tabulated form of measurements of of the wall thickness of the NIR stent. I think if we could blow it up, this says wall thickness measured in inches. And this is a series of measurements. 20 Go ahead. 21 Various different measurements bere. They are tabulated. 22 Boston Scientific's own measurements of wall thickness, measured in inches. These are measuring 24 A. These are Boston Scientifically measured as a standard deviation. And the standard deviation which is in red bere that I have had added is 0,0006, so that is six hundred thousandths of an inch variation. 25 So this is an incredibly uniform device. 26 MR, DISKANT: I can barely hear you, Mr. 27 Henor? 28 MR, DISKANT: I can barely hear you, Mr. 29 MR, DISKANT: I can barely hear you, Mr. 30 MR, DISKANT: Let me just offer 7236, which is the one without the standard deviation. I will address to other one later with the court. 31 A. Yes. 32 Q. Go ahead. 32 Q. Go ahead. 33 Page 442 34 Vive looked carefully through a lot of deductments; including one submitted to the FDA by Boston Scientific, to get a license to sell the NIR stent and 2 I have seen nothing that suggests that there is any significant variation in wall thickness ofther than this very limited point of the welds. There are very tiny 2 little welds along the length. They are only something 2 on the order of a couple of percent of the wall surface. 2  This was .00366, which was the average. All that have had added to this is a measurement of 4 variations do they cause? 2 A. They are absolutely tiny. The scale of the thing is small. There is an increase. I think again Boston 1 Countries with the court. 3 A. They are absolutely tiny. The scale of the thing is small. There is an increase. I think again Boston 1 Countries with the court. 3 A. Th	10	MR. BADENOCH: I don't mind it being shown	10	variation.
THE COURT: All right. Thank you.  MR. DISKANT: In that case, I don't mind. Can we show 7236 first? No. Why don't you put up 7236-A?  PY MR. DISKANT: On the wall thickness of the NR stent. I think if we could blow it up, this says wall thickness measured in inches. And this is a series of measurements of wall thickness, measured in inches. And this is a series of measurements of wall thickness, measured in inches. These are Boston Scientific's own measurements of wall thickness, measured in inches. These are measuring  Page 442  Various different measurements here. They are tabulated. Boston Scientific calculated the average. This was .00366, which was the average. All that I have had added to this is a measurement of theif you like, the variation, which is scientificelly measured as a standard deviation. And the standard deviation which is is a micretibly uniform device.  MR. DISKANT: 1 offer 7236 and 7236-A. Would you like me to address that, your Honor, it's just a question of playing the same rules here.  THE COURT: all right. Thank if we should be with the analysis you've just presented about the thickness of its wall surface?  A. No. I've looked carefully through a lot of of securities, including one submitted to the FDA by Boston likeness of its wall surface?  A. No. I've looked carefully through a lot of of securities, wall thickness of its wall surface?  A. No. I've looked carefully through a lot of of securities, wall thickness of its wall surface?  A. No. I've looked carefully through a lot of of securities, wall thickness of its wall surface?  A. No. I've looked carefully through a lot of of securities, wall thickness of its wall surface?  A. No. I've looked carefully through a lot of lacense to sell the NIR stent and lacense to sell the NIR stent and 20 like the sear surge to sell the NIR stent and 20 like the sear of the wall surface.  Page 442  Various different measurements here. They are neasuring  Page 442  Various different measurements here. They are neasuring  Page 442  Various different	11	and I don't object to the rest of it.	11	Q. Have you had an opportunity in the course of this
MR. DISKANT: In that case, I don't mind. Can we show 7236 first? No. Why don't you put up 7236-A? MR. DISKANT: No. Why don't you put up 7236-A? MYM. DISKANT: Okay. Dr. Buller, what has been added to 7236? A. All of this is is tabulated form of measurements of of the wall thickness of the Nix stent. I think if we could blow it up, this says wall thickness measured in inches. And this is a series of measurements. Og. Go ahead. A. These are Boston Scientific's own measurements of wall thickness, measured in inches. These are measuring A. Thise are Boston Scientific adoulated the average. This was 00366, which was the average. All that I have had added to this is a measurement shere. They are tabulated. Boston Scientific calculated the average. This was 00366, which was the average. All that I have had added to this is a measurement of it is in red here that I have had added to 90006, so that is is richer that I have had added to 90006, so that is in red here that I have had added to 90006, so that is in red here that I have had added is 00006, so that is in red here that I have had added is 00006, so that is in red here that I have had added is 00006, so that is in red here that I have had added is 00006, so that is in red here that I have had added is 00006, so that is in red here that I have had added is 00006, so that is in red here that I have had added is 00006, so that is in red here that I have had added is 00006, so that is in red here that I have had added is 00006, so that is in red here that I have had added is 00006, so that is sain hirrestibly uniform device.  MR. DISKANT: In the piut offer 7236, which is the one without the standard deviation. I will address the other one later with the court.  MR. BADENOCH: I don't actually object to mis accuration.  THE COURT: Exactly.  MR. BADENOCH: I don't actually object to mis accurations.  All the form measurements and the standard deviation of pure the had added is 000006, so that one.  All the form measurement of the wall trained.  The form memory, is the ab	12	MR. DISKANT: That's fine.	12	case to review Boston Scientific's internal documents?
15 Can we show 7236 first?  No. Why don't you put up 7236-A?  16 No. Why don't you put up 7236-A?  17 PY MR. DISKANT:  18 Q. Okay. Dr. Buller, what has been added to 7236?  19 A. All of this is is tabulated form of measurements of of the wall thickness of the Nix stent. I think if we could blow it up, this says wall thickness measured in inches. And this is a series of measurements of could blow it up, this says wall thickness measured in inches. And this is a series of measurements of wall thickness, measured in inches. These are measuring  10 A. These are Boston Scientific's own measurements of wall thickness, measured in inches. These are measuring  11 various different measurements here. They are tabulated. Boston Scientific calculated the average.  12 This was 0.0366, which was the average. All that I have had added to this is a measurement of the — if you like, is in red here that I have had added is .00006, so that is six hundred thousandths of an inch variation. So this is an incredibly uniform device.  10 MR. DISKANT: loffer 7236 and 7236-A. Would you like me to address that, your  11 Honor?  12 THE COURT: I can barely hear you, Mr.  13 MR. DISKANT: Let me just offer 7236, which is the owthout the standard deviation. I will address the other one later with the court. MR. BADENOCH: No objection to that one. And, your Honor, it's just a question of playing the same rules here.  11 THE COURT: Exactly. MR. BADENOCH: I don't actually object to his calculation if we can have the same way with our demonstratives.	13	THE COURT: All right. Thank you.	13	A. Yes.
No. Why don't you put up 7236-A?  17 BY MR. DISKANT:  18 Q. Okay. Dr. Buller, what has been added to 7236?  A. All of this is is tabulated form of measurements of the wall thickness of the NR stent. I think if we could blow it up, this says wall thickness measured in inches. And this is a series of measurements.  20 Go shead.  21 A. These are Boston Scientific's own measurements of wall thickness, measured in inches. These are measuring  22 Page 442  23 Various different measurements here. They are tabulated. Boston Scientific alculated the average.  24 A. Diskant:  25 This was, 03366, which was the average. All that I have had added to this is a measurement of the if you like, to evariation, which is scientifically measured as a standard deviation. And the standard deviation which is in the here that I have had added is .00006, so that is six hundred thousandths of an inch variation.  25 Stoke variation, which is solentifically measured as a standard deviation. I will of the wall thickness of its wall surface?  26 And, I've looked carefully through a lot of documents, including one submitted to the FDA by Boston Scientific, to get a license to sell the NIR stent and live to the FDA by Boston Scientific, to get a license to sell the NIR stent and live to the PDA by Boston Scientific, to get a license to sell the NIR stent and live to the PDA by Boston Scientific, to get a license to sell the NIR stent and live to the PDA by Boston Scientific, to get a license to sell the NIR stent and live to the PDA by Boston Scientific, to get a license to sell the NIR stent and live to the Welds. There is any significant variation in wall thickness of the wall very limited point of the welds. There is any little welds along the length. They are only something to the welds along the length. They are only something to the welds along the live for the very timited point of the welds. There are very timy 21 title welds along the length. They are only something to the very timited point of the welds along the length. They are	14	MR. DISKANT: In that case, I don't mind.	14	Q. Have you seen any internal documents that disagree
17 BY MR. DISKANT: 18 Q. Okay. Dr. Buller, what has been added to 7236? A. All of this is is tabulated form of measurements of the wall thickness of the Nrs stent. I think if we could blow it up, this says wall thickness measured in clinkes. And this is a series of measurements. 20 Q. Go ahead. 21 A. These are Boston Scientific's own measurements of wall thickness, measured in inches. These are measuring 22 A. These are Boston Scientific's own measurements of wall thickness, measured in inches. These are measuring 23 title welds along the length. They are only something on the order of a couple of percent of the wall surface. 24 Various different measurements here. They are tabulated. 25 Boston Scientific calculated the average. 26 This was .00366, which was the average. All that I have he had added to this is a measurement of the —if you like, the variation, which is scientifically measured as a standard deviation. And the standard deviation which is in red here that I have had added is .00006, so that is six hundred thousandths of an inch variation. 29 So this is an incredibly uniform device. 30 MR. DISKANT: 1 offer 7236 and 7236-A. 31 THE COURT: I can barely hear you, Mr. 32 THE COURT: I can barely hear you, Mr. 33 THE COURT: Exactly. 34 A. They are absoluted the verage. 35 A. I'm sorry, Mr. Diskant, I missed your question. 46 Variations do they cause? 47 A. They are absolutely tiny. The scale of the thing is small. There is an increase. I think again Boston Scientific's expert has measured them. I think at the 1 sort of the peak of the little hump. They can go up to 10 70 or so, 70-percent increase in thickness. 74 percent, 1 from memory, is the absolute maximum.  36 Standard deviation. I will address the other one later with the court. 37 MR. DISKANT: 1 offer 7236, which is the one without the standard deviation. I will address the other one later with the court. 38 MR. DISKANT: 1 offer 7236, which is the one without the standard deviation of playing the same rules here. 39 THE COURT: Exactly. 30 MR. BADEN	15	Can we show 7236 first?	15	
18 Q. Okay. Dr. Buller, what has been added to 7236?   19 A. All of this is is tabulated form of measurements of the wall thickness of the NIR stent. I think if we could blow it up, this says wall thickness measured in inches. And this is a series of measurements.   20 Go ahead.	16	No. Why don't you put up 7236-A?	16	
19 A. All of this is is tabulated form of measurements 20 of the wall thickness of the Nix stent. I think if we 21 could blow it up, this says wall thickness measured in 22 inches. And this is a series of measurements. 23 Q. Go ahead. 24 A. These are Boston Scientific's own measurements of 25 wall thickness, measured in inches. These are measuring  Page 442  1 various different measurements here. They are tabulated. 2 Boston Scientific calculated the average. 3 This was .00366, which was the average. All that I have had added to this is a measurement of the if you like, 4 the variation, which is scientifically measured as a 5 standard deviation. And the standard deviation which 6 is in red here that I have had added is .00006, so that 8 is six hundred thousandths of an inch variation. 9 So this is an incredibly uniform device. 10 MR DISKANT: 1 offer 7236 and 7236-A. 11 Would you like me to address that, your 12 Honor? 13 THE COURT: I can barely hear you, Mr. 14 Diskant. 15 MR. BADENOCH: 1 don't actually object to 16 his calculation if we can have the same way with our 17 demonstratives.  18 All of this is is tabulated thickness of the NIR stent and 20 I have seen nothing that suggests that there is any significant variation in wall thickness other than this 22 very limited point of the welds. There are very tiny 23 little welds along the length. They are only something 24 on the order of a couple of percent of the wall surface. 25 They take up a tiny fraction of the wall 26 They take up a tiny fraction of the wall surface. 27 They take up a tiny fraction of the wall variations. 28 O, Now, these welds they talked about, what kind of variations do they cause? 29 A. I'm sorry, Mr. Diskant, I missed your question. 30 O, Now, these welds they talked about, what kind of variations in thicknesses do the welds 31 Now, these welds they talked about, what kind of variations in thickness of the welds. 32 O, Now, these welds they talked about, what kind of variations in thickness of the wall surface. 31 This was .00366,	17	BY MR. DISKANT:	17	A. No. I've looked carefully through a lot of
of the wall thickness of the NIR stent. I think if we could blow it up, this says wall thickness measured in inches. And this is a series of measurements.  Q. Go ahead:  A. These are Boston Scientific's own measurements of wall thickness, measured in inches. These are measuring  Page 442  various different measurements here. They are tabulated. Boston Scientific calculated the average. This was .00366, which was the average. This was .00366, which was the average. This was .00366, which is scientifically measured as a standard deviation. And the standard deviation which is in red here that I have had added is .00006, so that is six hundred thousandths of an inch variation. So this is an incredibly uniform device. MR. DISKANT: Left me just offer 7236, which is the one without the standard deviation. I will defress the other one later with the court.  MR. DISKANT: Let me just offer 7236, which is the one without the standard deviation. I will address the other one later with the court.  MR. BADENOCH: 1 don't actually object to his cisculation if we can have the same way with our demonstratives.	18	Q. Okay. Dr. Buller, what has been added to 7236?	18	documents, including one submitted to the FDA by Boston
could blow it up, this says wall thickness measured in chees. And this is a series of measurements.  Q. Go ahead.  A. These are Boston Scientific's own measurements of wall thickness, measured in inches. These are measuring  Page 442  I various different measurements here. They are tabulated. Boston Scientific calculated the average. This was .00366, which was the average. All that I have had added to this is a measurement of the — if you like, to the variation, which is scientifically measured as a standard deviation. And the standard deviation which is in red here that I have had added is .00006, so that is six hundred thousandths of an inch variation.  So this is an incredibly uniform device. MR. DISKANT: 1 offer 7236 and 7236-A. Would you like me to address that, your Honor?  THE COURT: I can barely hear you, Mr.  Diskant.  MR. BADENOCH: 1 con better with the court.  MR. BADENOCH: 1 don't actually object to his calculation if we can have the same way with our demonstratives.	19	A. All of this is is tabulated form of measurements	19	Scientific, to get a license to sell the NIR stent and
22 inches. And this is a series of measurements. 23 Q. Go ahead. 24 A. These are Boston Scientific's own measurements of wall thickness, measured in inches. These are measuring  Page 442  1 various different measurements here. They are tabulated. 2 Boston Scientific calculated the average. 3 This was .00366, which was the average. All that I have had added to this is a measurement of the — if you like, the variation, which is scientifically measured as a standard deviation. And the standard deviation which is in red here that I have had added is .00006, so that is six hundred thousandths of an inch variation. 25 So this is an incredibly uniform device. 26 MR. DISKANT: I offer 7236 and 7236-A. 27 Would you like me to address that, your 28 Honor? 29 THE COURT: I can barely hear you, Mr. 30 Diskant. 31 The COURT: Exactly. 32 Very limited point of the welds. There are very tiny 20 in the order of a couple of percent of the wall surface. 32 They take up a tiny fraction of the wall surface. 33 This was .00366, which was the average. All that I have had added to this is a measurement of the — if you like, the variations do they cause? 34 A. They are absolutely about, what kind of variations do they cause? 35 A. I'm sorry, Mr. Diskant, I missed your question. 46 Q. What kind of variations in thicknesses do the welds is six hundred thousandths of an inch variation. 48 A. They are absolutely tiny. The scale of the thing is small. There is an increase. I think again Boston Scientific's expert has measured them. I think at the sort of the peak of the little hump. They can go up to 70 or so, 70-percent increase in thickness. 74 percent, 15 from memory, is the absolute maximum.  15 MR DISKANT: Let me just offer 7236, which 16 is the one without the standard deviation. I will address the other one later with the court. 18 MR BADENOCH: No objection to that one. 19 And, your Honor, it's just a question of playing the same rules here. 20 THE COURT: Exactly. 21 MR BADENOCH: I don't actually object to 22 his calculation if we can	20	of the wall thickness of the NIR stent. I think if we	20	I have seen nothing that suggests that there is any
23 Q. Go ahead.  A. These are Boston Scientific's own measurements of wall thickness, measured in inches. These are measuring  Page 442  1 various different measurements here. They are tabulated. 2 Boston Scientific calculated the average. 3 This was .00366, which was the average. All that I have had added to this is a measurement of the — if you like, to the variation, which is scientifically measured as a standard deviation. And the standard deviation which is in red here that I have had added is .00006, so that is six hundred thousandths of an inch variation.  So this is an incredibly uniform device.  MR. DISKANT: I offer 7236 and 7236-A.  Would you like me to address that, your  Honor?  THE COURT: I can barely hear you, Mr.  Diskant.  MR. DISKANT: Let me just offer 7236, which is the one without the standard deviation. I will address the other one later with the court.  MR. BADENOCH: No objection to that one.  And, your Honor, it's just a question of playing the same rules here.  THE COURT: Exactly.  MR. BADENOCH: I don't actually object to his calculation if we can have the same way with our demonstratives.  23 little welds along the length. They are only something on the order of a couple of percent of the wall surface.  They take up a tiny fraction of the wall surface.  They take up a tiny fraction of the wall surface.  They take up a tiny fraction of the wall surface.  They take up a tiny fraction of the wall surface.  2	21	could blow it up, this says wall thickness measured in	21	significant variation in wall thickness other than this
A. These are Boston Scientific's own measurements of wall thickness, measured in inches. These are measuring  Page 442  1 various different measurements here. They are tabulated. Boston Scientific calculated the average. 3 This was .00366, which was the average. All that I have had added to this is a measurement of the if you like, to had added to this is a measurement of the if you like, to had added to this is a measurement of the if you like, to had added to this is a measurement of the if you like, to had added to this is a measurement of the if you like, to had added to this is a measurement of the if you like, to had added to this is a measurement of the if you like, to had added to this is a measurement of the if you like, to had added to this is a measurement of the if you like, to had added to this is a measurement of the if you like, to had added to this is a measurement of the if you like, to had added to this is a measurement of the if you like, to had added to this is a measurement of the if you like, to had added to this is a measurement of the if you like, to had added to this is a measurement of the if you like, to had added to this is a measurement of the if you like, to had added to this is a measurement of the if you like, to had added to this is a measurement of the if you like, to had added to this is a measurement of the if you like, to had added to this is an incredibly uniform device.  MR. DISKANT: I offer 7236 and 7236-A.  MR. DISKANT: Let me just offer 7236, which is the one without the standard deviation. I will address the other one later with the court.  MR. BADENOCH: No objection to that one.  MR. BADENOCH: I don't actually object to this calculation if we can have the same way with our demonstratives.  24 on the order of a couple of page they all they are they talked about, what kind of variations in thicknesses do the welds to a liverage.  D. Now, these welds they talked about, what kind of variations in thicknesses do the	22	inches. And this is a series of measurements.	22	very limited point of the welds. There are very tiny
Page 442 1 various different measurements here. They are tabulated. 2 Boston Scientific calculated the average. 3 This was .00366, which was the average. 1 2	. IN THE UNITED ST	ATES DISTRICT COURT		1	· ·
3	13 AND FOR	DISTRICT OF DELAWARE		2	PROCEEDINGS
	CORDIS CORPORATION, Plaintiff	: CIVIL ACTION		3	
5	V5.			4	(Proceedings commenced at 9:25 a.m., and the
6	MEDTRONIC AVE, INC., BOSTON	:		5	following occurred without the presence of the jury.)
,	SCIENTIFIC CORPORATION and SCIMED LIFE SYSTEMS, INC.,			6	•
8	Defendants	: NO. 97-550 (SLR)		7	MR. BADENOCH: Good morning, your Honor.
9	BOSTON SCIENTIFIC CORPORATION and SCIMED LIFE SYSTEMS, INC.,	: CIVIL ACTION		8	THE COURT: Good morning. You can keep
10	Plaintiffs	:		9	talking. I just need to move some of these things out of my
11	vs.	:		10	way.
12	ETHICON, INC., CORDIS CORP. and JOHNSON & JOHNSON	:		11	All right.
13	INTERVENTIONAL SYSTEMS CO., Defendants	: : NO. 98-19 (SLR)	!	12	MR. BADENOCH: We did prepare some language
14	De l'estatures	, 10, 30 13 (500)		13	that we believe should be given to the jury as an
15	CORDIS CORPORATION,	: CIVIL ACTION		14	instruction at the beginning on the business of referring
16	Plaintiff	: . CTAID WELLOW	•	15	to the absence of Brian Brown. And counsel and I have
17	vs.	:		16	agreed on this, but we've scribbled up our form in which
1.8	MEDITRONIC AVE, INC., BOSTON SCIENTIFIC CORPORATION AND	:		17	we prepared the agreement.
19	SCIMED LIFE SYSTEMS, INC., Defendants	: : NO. 98-197 (SLR)		18	It might be better if I read it or I can hand
20	betendants .	; NO. 38-137 (SER)		19	it up. But what it says is, this is a timed trial in
21		Wilmington, Delaware Wednesday, March 23, 2005		20	which the total time for each party to present its case
22		9:25 o'cleck, a.m.		21	is limited. Sometimes a party does not call a witness on
23	BEFORE: HONORABLE SUE L. ROBIN	SON, Chief Judge, and a jury		22	the list of witnesses you read at the outset of the case.
24		Valerie J. Gunning and Leonard A. Dibbs,		23	You are not to infer anything from that.
25		Official Court Reporters	s	24	THE COURT: All right.
				25	MR. BADENOCH: I will hand this up.
		•			Page 1155
1	APPEARANCES:	•	Page 1153	1	THE COURT: Hand it up, yes, then I will make
2	ASHBY & GEDDES BY: STEVEN J. BALICK, ESO.			2	sure I can read it as well as you did, Mr. Badenoch.
3	or oration someth, E.Q.			3	(Mr. Badenoch handed a document to the Court.)
4	-and-			4	THE COURT: Yes, I think I have it.
5	PATTERSON, BELKNAP, WEBB &	TYI FR II P		5	MR. BADENOCH: The other thing, your Honor,
6	BY: GREGORY L DISKANT, ESQ., EUGENE M. GELERNTER, ESQ.	1	i		we had we're down to just a very few extremely minor
7	WILLIAM F. CAVANAUGH, JR., MICHAEL TIMMONS, ESQ. and	, ESQ.,		7	things on the verdict form and the instruction, and I
8	SCOTT HOWARD, ESQ. (New York, New York)			8	really think this is just clarity.
9	, , , , , , , , , , , , , , , , , , , ,		j	9	In the verdict form, where it says Claim 23
10	-and-	•		10	of the '762 patent requiring that the wall of, now it
11	JOHNSON & JOHNSON			11	says a tubular member, and we want it to say the tubular
12	BY: ERIC L'HARRIS, ESQ.			12	member, which conforms, I think, to several other places
13 .	Counsel for Cordis Corpora	ation		13	throughout the instruction. And we feel, since there's
14	YOUNG, CONAWAY, STARGATT &	taylor		14	clearly one tubular member in the accused stent that
15	BY: JOSY W. INGERSOLL, ESQ.			15	has been, as it has been presented to the jury, that
16	-and			16	that would be clearer.
17	· ·			17.	I really think it's non-substantive. Counsel
18	KENYON & KENYON BY: GEORGE BADENOCH, ESQ.,			17.	has said, Well, no, it departs from the claim
19	MARK CHAPMAN, ESQ. and WALTER HANLEY, ESQ.			19	construction, and I don't it did not seem to me that
20	(New York, New York)	_		20	that was correct.
21	Counsel for Boston Scientif Corporation	ic		21	
22	•••				THE COURT: Well, I guess if it's
23			į.	22	non-substantive and if it isn't in dispute, and the
24			- 1	23	claim construction reads an and we're going to the jury
25			- 1	24	this morning, I wasn't confident that I wanted to go
L	····			25	to the trouble of changing the to an every place it said

	Page 1288		Page 1290
1	other thing.		is and Mr. Badenoch spent all of his direct examination
2	He also repeatedly said Dr. Palmaz has been	2	explaining away BSC's documents and not showing you and
3	adequately compensated, Johnson & Johnson has been	3	that supported his position.
4	adequately compensated. That's not a proper argument,	4	They are coming before you, asking you to
5	THE COURT: No more of that, for sure.	5	invalidate pioneering Palmaz patent, Claim 23, based on
6	MR. DISKANT: Thank you, your Honor.	6	the ridiculous staple-like design of Ersek, and I mean
7	(Luncheon recess taken:)	7	no disrespect to Ersek, but it did not work and it
8		8	wasn't ever commercialized. It has nothing whatever to
9		9	do with stenting.
10		10	Let's talk, first, about the right way to do
11		11	business with respect to the patent system. Not
12		12	trespassing.
13		13	Mr. Croce, company Group Chairman from Johnson
14		14	& Johnson, told you other competitors, not BSC, other.
15		15	competitors have sought permission to use Abbott's to
16		16	use Palmaz's patent by taking a license.
17		17	One example is Abbott Pharmaceutical, a
18		18	large U.S. pharmaceutical company. They knew they needed
19		19	our permission to market stents in the United States.
20		20	That's the truth if it's going to be a balloon expandable
21		21	slotted tube stent like BSC sells. So they offered to
22		22	pay a substantial royalty and we came to terms and we
23		23	gave them a license to go on the market. The '762 patent.
24		24	26 percent on net sales. Guaranteed if you look at the
25		1 .	contract which is in evidence, \$500 a stent for a drug-
1	Page 1780	1	Dana 1

Page 1292

1 therapies, like Dr. Palmaz's was in 1986, because those

- 2 innovative, risk-taking ideas, with large capital
- 3 investments from large companies that are able to make
- 4 that investment and take the risk of complete and utter
- 5 loss, that's what makes us have a better, safer,
- 6 healthier society.

Johnson & Johnson is willing to pay for

- 8 innovative technologies. It invested a hundred million
- 9 dollars in the Palmaz, bringing it to market. It paid
- 10 Dr. Palmaz properly many millions of dollars in royalties
- 11 and then bought out his rights for \$200 million.

Dr. Palmaz is very deservedly a wealthy man.

- 13 Johnson & Johnson, very correctly paid him for the right
- 14 to use his invention and it purchased the rights to the
- 15 '762 patent so it could protect its rights on the
- 16 marketplace of ideas. And Boston and SciMed just don't
- 17 seem to care.
- 18 Now, I like George Badenoch. He's a fine
- 19 person, a fine lawyer. He tries an able case, but his
- 20 clients, Boston Scientific and SciMed, are engaged in a,
- 21 say this respectfully, but intentionally, a dirty, mean-
- 22 spirited game. You saw it here in this trial.
- They don't know what to say about Dr. Palmaz,
- 24 so in his opening, George said, Oh, Dr. Palmaz is
- 25 entitled to credit, we agree with that. He made an
- Page 1293
- 1 important contribution. We all owe him great credit for
- 2 what he did.
- 3 And then Dr. Palmaz showed up and was cross-
- 4 examined. And was this disgusting? We went through some
- 5 of his awards.
- 6 Oh, shortly before that, you donated to that
- 7 institution a million dollars; correct?
- 8 That's the University of Texas, where Dr.
- 9. Palmaz is on the faculty and he has given them a whole
- 10 lot more than a million dollars. He has funded research
- 11 for years there.
- 12 Did he buy this award? Was that the point
- 13 of that questioning? No invention has revolutionized
- 14 the treatment of coronary artery disease like the
- 15 intravascular stent. Developed by Dr. Julio Palmaz,
- 16 the Palmaz stent was patented in 1988. The stent has
- 17 impacted the lives of millions of people around the globe.
- 18 Was Boston trying to suggest that he paid off
- 19 the University of Texas? That he bought entry into the
- 20 Smithsonian?
- 21 Or this one: Do you see the one of the
- 22 sponsors listed here is Cordis? Yes, Cordis and a whole
- 23 bunch of other companies, including other stent
- 24 manufacturers, are sponsors of Surfaces in Biomaterials
- 25 Foundation, a respected, not-for-profit in this industry.

- 1 Okay. But is it true that the stents made Dr. Palrnaz's
- 2 device -- it just happens to be true. You know what?
- 3 Boston Scientific, the defendant in this case, agreed
- 4 with that in 1997, when it agreed to award the
- 5 Palmaz/Schatz stent the award for the most important new
- 6 medical device in the last 15 years. All of this comes
- 7 from Dr. Palmaz.
  - Oh, yes. Cordis is a sponsor. So are many
- 9 other fine companies and this is a very fine and fitting
- 10 tribute to Dr. Palmaz.
- 11 Look. Here's a picture with you and your
- 12 wife and underneath it, there's Marv Woodall. Who's
  - 3 that? Oh, my. Here at the International Society of
- 14 Endovascular Specialists, medical doctors have gathered
- 15 to honor Dr. Palmaz for his development of the
- 16 endovascular stent, a landmark professional contribution,
- 17 and look at this just horribly embarrassing fact. I
- 18 just can't believe it. Mary Woodall, who used to work
- 19 at Johnson & Johnson, offered a toast. I will offer a
- 20 toast to Julio Palmaz any day of the week.
- 21 What was that cross-examination about? And
- 22 then it continued into the testimony of each and every
- 23 one of their witnesses.
- 24 Kobi Richter, Dr. Richter. The smaller
- 25 the invention, the more impressive. Oh, so small, so

/3 |

- 1 impressive. But he pushed it forward and he succeeded.
- 2 I'm not trying to adjudge the invention, small though it
- 3 is. Thank you, Dr. Richter.
  - How about this? Without being derogatory,
- 5 Dr. Buller, he may be a very good stent driver. I want
- 6 to believe that he is. I want to believe that.
- 7 Thank you, Dr. Richter, for wanting to
- 8 believe that.

4

- 9 I would be proud to have Dr. Buller operate on
- 10 me or my children on any day.
- 11 Then Dr. Snyder. I don't consider parties,
- 12 these are nice recognitions for hard work. It embarrassed
- 13 George so much, he had to talk to you about it.
- 14 Here's another great one. The Palmaz stent,
- 15 part of a special presentation, the world's most
- 16 successful medical device. That's inaccurate. Must be
- 17 his home town paper. The most successful medical device
- 18 would be one of the more recent stents? They're all
- 19 Palmaz stents. That's the point. That's why we're here.
- 20 Palmaz invented the longitudinally slotted balloon
- 21 expandable stent, which everyone uses. Everyone has built
- 22 on his fine contribution to medicine.
- 23 Dr. Low. Palmaz invented the peripheral
- 24 stent with the balloon. Schatz developed the heart one.
- 25 Yeah. Schatz developed the heart one.

CondenseIt' ry Trial - Volume I Wednesday, December o, 2000 Page 2224 VOLUME I IN THE UNITED STATES DISTRICT COURT IN AND FOR THE DISTRICT OF DELAMARE 2 PROCEEDINGS 2 CORDIS CORPORATION. 3 Plaintiff (Proceedings commenced at 9:00 a.m., and the 5 following occurred without the presence of the jury.) MEDTRONIC AVE. INC., et al. BO. 97-550 (SIR) BOSTON SCIENTIFIC CIVIL ACTION THE COURT: I understand there is are an issue. CORPORATION, et al., . MR. DISKANT: Yes, your Honor. The defendants Plaintiffs 9 wish to play today the videotape deposition of Dr. Stanley 10 ETHICON, INC., at al., Carson. We do not object to that. Also, however, they 11 WO. 98-19 (SLR) wish to introduce into evidence Dr. Stanley Carson's sworn Defendants 12 CIVIL ACTION declaration. CORDIS CORPORATION. 12 13 Plaintiff 13 That is classic hearsay. Dr. Carson was 14 examined. He was asked questions. He was cross-examined. TI. 15 BOSTON SCIENTIFIC They had the opportunity to bring him here to Court live 16 CORPORATION, et al. if they wanted. WO. 98-197 (SLR) 17 Defendants 17 But a written witness statement does not 18 Wilmington, Delaware 18 come into evidence, it doesn't go back to the jury so Wednesday, December 6, 2000 9:00 o'clock, a.m. 19 they can read it. It is inadmissible. We object to it. 20 20 MR. BADENOCH: Your Honor, the problem is 21 REFORE: HOMORABLE SUE L. ROBINSON, Chief Judge, and a jury 21 this: Dr. Carson is, of course, not under our control. 22 22 He lives in California. Unlike a situation where we 23 Official Court Reporters were taking a - if we had had an opportunity to examine 24 him on direct and they had cross-examined, which is not 25 the situation here - what happened here is he filed a Page 2225 Page 2223 1 APPEARANCES 1 declaration in the Cook case. He was then fully cross-2 2 examined on the declaration by counsel for ETP and ASHBY & GEDDES BY: STEPHEN J. BALKIL ESO. 3 counsel for Cordis. What we have done to create the video is to 5 collect from that - from what is basically hostile 6 PATTERSON, BELNAP, WEBB & TYLER, LLP 6 examination the most coherent testimony that we can. BY: GREGORY L. DISKANT, ESQ., EUGENE M. GELERNTER, ESQ. 7 7 In that testimony, there is clear references WELIAM F. CAVANAUGH, ESO, and MICHAEL J. TIMMONS, ESQ. (New York, New York) 8 to a paragraph of the declaration he is talking about. And in order to make sense of what he is talking about, 10 the jury needs to see the text of what it is that he is 11 JOHNSON & JOHNSON 11 being cross-examined about by counsel for EGP and/or 12 BY: ERIC I HARRIS, PSO. 12 Cordis. 13 Counsel for Plaintiffs 13 The other thing is that, basically, - so 14 YOUNG, CONAWAY, STARGATT & TAYLOR BY: JOSY W. INGERSOLL, ESQ. 14 for context, it is absolutely necessary. Because they 15 cross-examined, basically, the policy on hearsay is that 16 -andyou don't allow hearsay because there is no chance to 17 17 confront and cross-examine the witness. That is not KENTON & KENYON BY: GEORGE E, BADENOCK ESQ. 18 18 true here. 10 PAUL A. BONDOR, ESQ., ALBERT J. BRENEISEN, ESQ. What we have is kind of like the English 19 20 MICHAEL ZACHARY, ESO, and ARTHUR GRAY, ESQ. (Washington, D.C.) 20 system or the system in many courts in this country where 21 21 you have direct testimony put in by a statement and then 22 Council for Defendants 22 you have live cross-examination. 23 23 The other thing is the dates. They are in 24 the part that they are going to play to attack Dr. Carson, 25 who is going to point out that he was paid for an

                                                                                                                          Page 2292
             *Answer: Yes. Inasmuch as I understand fraud
                                                                     1 balloon to a specific location.
                                                                     2
                                                                                 "And I don't feel now, to this day, that that
     that - I need to clarify that.
                                                                     3
                                                                        was his original concept. I feel I presented that concept
  3
             "I was upset when I read this, and I felt I
                                                                        to him. And at the time that I did it, I spent a lot of
    had been misled.
                                                                        time explaining the stent and the concept and didn't get
             "Question: And why?
  5
                                                                        any feeling that this is anything but unfamiliar territory
             "Answer: There's more than one item, and I
  6
                                                                        to him at that time.
     may not take these in the order that they appear in this.
                                                                     7
  7
                                                                                "The other thing that's going on here is
             "Question: Okay. Go ahead. If you can
                                                                     8
  8
    remember off the top of your head, go ahead and tell me.
                                                                     9
                                                                        that -- I don't know whether these are page or paragraph
 9
             "Answer: There are drawings here, and the
                                                                        numbers here, the numbers at the top.
                                                                    10
 10
     first drawing I recognize as being very similar to and
                                                                    11
                                                                                "Question: Are page numbers.
 11
                                                                    12
                                                                                "Answer: All right. I'm going to refer,
     very much akin to the one that I made, that I gave to Dr.
 12
 13
     Palmaz when I first proposed this idea.
                                                                    13
                                                                        then, to Page No. 4 on the document '665.
                                                                    14
                                                                                "Mr. Kramer: Let me explain this. That's
             "Question: Are you referring --
 14
             "Answer: That is referred to as 1-A and 1-B
                                                                    15
                                                                        Page No. 4, Column 4.
 15
    in this document,
                                                                    16
                                                                                "And then if you want to look under Column 4
 16
                                                                    17
                                                                        where you see the numbers here, you can refer specifically
             "Question: Okay. And --
17
                                                                    18
                                                                        to those numbers.
18
             "Mr. Kramer: The record should reflect you're
19 holding up the patent when you say this document, the '665
                                                                    19
                                                                                "That would be Column 4, Line 10, for example,
                                                                    20
                                                                        would be that line. That's the way you read these?
20
    patent.
                                                                    21
                                                                                "Answer: Four lines above Line 10 on Column 4
21
            "Go ahead.
                                                                    22 in '665, it states that a further feature of the present
22
             "The witness: Yes, I think it's also labeled
23
    here at the top as patent.
                                                                    23
                                                                        invention is that a wire mesh tube may be utilized as the
24
             "Now, I would assume perhaps -- I may be all
                                                                        intraluminal graft, which is I don't believe how I
                                                                        visualized the Palmaz stent as being a wire mesh.
     wrong - but also for other reasons that the patent, if
25
                                                       Page 2291
                                                                                                                         Page 2293
 1 it existed - and, you know, I didn't have any reason to
                                                                                "I feel that the wire mesh was one of the
 2 question it being - I don't think I thought about it.
                                                                    2 ideas that I had originally proposed to Palmaz and to
 3 But Johnson & Johnson's putting money into the market,
                                                                       Vascor.
    there's probably a patent,
                                                                               "And reading on Column 3, same line --
                                                                    5
 5
            "I had worked with them long enough to know
                                                                               "Mr. Kramer: Yes, yes.
 6 that they like to protect, as does everybody, their
                                                                    6
                                                                               "Answer: Same lines. Okay. - Line 25 and
    investments.
                                                                    7
                                                                       in that same paragraph down from that --
 7
 8
            "Now, I would have felt that the patent would
                                                                    8
                                                                               "Mr. Kramer: You can read them into the
                                                                       record, if you wish.
    revolve around a particular design, configuration,
                                                                    9
 9
    manufacturer and use of the Palmaz configuration, or
                                                                    10
                                                                               "The witness: Okay.
    Palmaz stent it's been referred to, which is a specific
                                                                   11
                                                                               "Answer: 'The present invention includes, an
11
12
    type of stent,
                                                                   12 expandable, tubular shaped membrane -- member having first
                                                                       and second ends and a wall surface disposed between the
13
            "That's one item.
14
            "And so here is another drawing that I don't
                                                                      first and second ends, the wall surface being formed by a
    think is original with Dr. Palmaz, but it now appears in
                                                                       plurality of intersecting elongate members' - which to me
15
16
    this patent and -
                                                                       appears to be a wire mesh.
17
                                                                   17
            "Question: Could you, for the record, say --
                                                                               "And again, I was a bit shocked.
    when you said this -- another drawing --
                                                                   18
18
                                                                               One other item comes to mind is the date.
                                                                   19
            *Answer: Another drawing, Figure 1-A and 1-B.
19
                                                                               "Question: And what about that upset you?
   2-A and 2-B appears to be that of the Palmaz stent. The --

                                                                                                                             Page 2296
                                                                       I or the recurrence after dilatation or the unsuccessful
  1 I was told I was signing this patent.
  2
             "So I feel that if he were going to patent my
                                                                          dilatation when an artery rebounds and perhaps keep the
  3 ideas, that he should at least have told me.
                                                                          artery open longer but, certainly, initially, give more
             "Question: The proposal to - that you refer
                                                                          successful result, was to put a stent at the time of the
  5 to as the proposal to Hancock - Vascor, tell me what that
                                                                          dilatation, and the stent would keep the artery open by
  6 was like.
                                                                          its configuration, framework, support.
             "Answer: Well, it was a pretty basic proposal
                                                                                  "We spent a lot of time in the proposal, in
 8 in that we felt we needed to, in discussions with Dave
                                                                          our discussions between Dr. Palmaz, myself and Dr. Lentz
    Lentz, outline why something was needed, what was being
                                                                          as to what would be acceptable with them as a proposal,
10 done now and what we were proposing.
                                                                          in deciding how much time in the proposal to give to the
11
             "Question: When you say 'we,' who's the
                                                                          current state of the art and catheters being used and so
12 other -- who's the 'we?'
                                                                     12
                                                                         on, because we felt we were presenting it to people that
13
             "Answer: In discussions with Dave Lentz, he
                                                                     13
                                                                         weren't right in the midst of doing CAT digitization and
14 felt they needed this to fund it. They were fairly
                                                                     14
                                                                         this sort of thing.
15 unfamiliar with catheters and catheter work, that they
                                                                     15
                                                                                  "Then we went to describe -- to make a
16 were not -- that wasn't part of their -- apparently,
                                                                     16 proposal in the last part of it after outlining the
17 their mission.
                                                                         problem and the possible solution for the problem in a
             "Question: But I thought you said we drafted
                                                                     18
                                                                         way that it could be done.
18
19
    something. Who drafted something?
                                                                     19
                                                                                  "There's some drawings. Both of those
             "Answer: I don't - we thought is what I recall
                                                                     20
                                                                         drawings, I think, were in the proposal.
20
                                                                     21
                                                                                  "The drawings that I looked at earlier,
21 saying."
                                                                     22
                                                                        they're on one sheet of paper. They were held up for
22
23
                                                                     23
                                                                         the camera.
24
                                                                     24
                                                                                  "I don't think they're in that format, as I
                                                                        recall. They may be. But to show what it might look
25

                                                                                                                           Page 2297
                                                                      1 like.
                                                                      2
                                                                                 "This is just a proposal. We have had not
            "Question: Was there a written proposal given
    to Vascor?
                                                                        made one. We wanted to show how it might be delivered.
                                                                         We wanted to show how it might be made -- not how, but
            "Answer: Yes.
 5
                                                                      5 what it might be made of because the people that I was
            "Question: Who drafted that proposal?
            "Answer: I drafted it, along with Dr. Palmaz.
                                                                        working with at Vascor and Hancock, a lot of the research
 7 We both worked on it. We exchanged copies and came up with
                                                                        that has been done has been on materials that can be used
                                                                         and retained in the vascular system.
 8 a final.
 9
                                                                     9
                                                                                 "Question: I'm sorry. A lot of research who
            "Question: What did it say?
                                                                     10 has done? That you have done or that they have done?
10
            "Answer: Best of my recollection, it stated
                                                                                 "Answer: That I had done with them had been
11
                                                                    11
   that arteries that are obstructed cause problems -
12
                                                                    12 done on the use of different materials in the vascular
            "The Reporter: I am sorry.
13
                                                                        system that would or would not be acceptable to be left
            "The Witness: - arteries that are obstructed
                                                                    14
                                                                        in the vascular system.
    cause problems in the human body and that one of the ways
                                                                    15
                                                                                 "Question: When was the proposal written?
   to open the arteries or to get necessary blood flow
                                                                    16
16
   through the arteries was to dilate the artery.
                                                                                 "Answer: Most of the proposal, I believe, was
17
                                                                    17 written in the early eighties. Early eighties.
            "One problem with the technique of dilating an
18
   artery is that some arteries couldn't be dilated to
                                                                    18
                                                                                 "Ouestion: 1980?
                                                                    19
                                                                                 "Answer: Yes.
    adequate size and that some arteries would rebound after
                                                                    20
20
    dilatation, and thrombosis in some arteries or clot
                                                                                 "Question: Well, let me ask you something.
    formations in some arteries would occur after dilatation,
                                                                       Had you thought of this concept prior to Dr. Palmaz asking
22
            "Basically stated, what we felt between us,
                                                                    22
                                                                        you the question that you talk about in Paragraph 6?
                                                                    23
   the current state of the art of balloon dilatation was
                                                                                 "Answer: I thought of the idea of leaving
23
                                                                    24
24
    the arteries.
                                                                        something in the blood vessel, yes.
                                                                    25

CondenseIt<sup>™</sup> Jury Trial - Volume C Monday, March 21, 2005 Page 548 1 - VOLUME C -THE UNITED STATES DISTRICT COURT I 2 IN AND FOR THE DISTRICT OF DELAWARE 2 PROCEEDINGS 3 CORDIS CORPORATION. CIVIL ACTION Plaintiff 4 (Proceedings commenced at 9:05 a.m., and the 5 5 following occurred without the presence of the jury.) 6 MEDTRONIC AVE, INC., BOSTON 6 SCIENTIFIC CORPORATION and 7 SCIMED LIFE SYSTEMS, INC., 7 Defendants NO. 97-550 (SLR) THE COURT: Mr. Diskant? Я BOSTON SCIENTIFIC CORPORATION 8 CIVIL ACTION MR. DISKANT: Your Honor, we have a few and SCIMED LIFE SYSTEMS, INC., Plaintiffs 9 9 issues to raise before the examinations begin, I'm sorry 10 vs. 10 to say. In one way or another, they all relate to the 11 ETHICON, INC., CORDIS CORP. issue that we raised last week, which was BSC's attempt 12 and JOHNSON & JOHNSON INTERVENTIONAL SYSTEMS CO., to suggest that there was only one claim in issue, and 13 Defendants NO. 98-19 (SLR) that they were entitled to some kind of mileage after 13 14 that. Your Honor last week admonished them that that 15 CORDIS CORPORATION. CIVIL ACTION Plaintiff 15 was misleading and asked them to stop. 16 We received demonstratives today, last night, 16 17 MEDTRONIC AVE, INC., BOSTON 17 for the anticipated testimony of their first expert, Dr. 18 SCIENTIFIC CORPORATION and SCIMED LIFE SYSTEMS, INC., Snyder, which are riddled with this kind of comparison. 19 Defendants NO. 98-197 (SLR) 19 I raise it now because Dr. Buller is about to begin cross 20 Wilmington, Delaware 20 and I fear they may attempt the same cross with him. 21 Monday, March 21, 2005 9:05 o'clock, a.m. I will hand up a package of documents. 21 BEFORE: HONORABLE SUE L. ROBINSON, Chief Judge, and a jury 22 First, what is happening is the theory of 23 Valerie J. Gunning and BSC's case has radically changed. The first document in 23 24 Leonard A. Dibbs, Official Court Reporters 24 your pile is Dr. Snyder's expert report on which we 25 prepared the case. And if you just look at Paragraph 7, Page 547 Page 549 1 APPEARANCES: 1 he summarizes the theory of their case, which is one of ASHBY & GEDDES 2 ordinary skill who knew about balloon angioplasty, knew BY: STEVEN J. BALICK, ESQ. 3 that the Palmaz abstract discloses the concept of a 4 -andballoon expandable stent, and then the Ersek structures 5 PATTERSON, BELKNAP, WEBB & TYLER LLP BY: GREGORY L. DISKANT, ESQ., of particular design that one would combine. 5 6 EUGENE M. GELERNTER, ESQ. 6 And so basically their theory of the case 7 WILLIAM F. CAVANAUGH, JR., ESQ. MICHAEL TIMMONS, ESQ. and was that Claim 23 as it is, in fact, is, a structure SCOTT HOWARD, ESQ. (New York, New York) 8 claim for use in a particular method and then they were 9 combining the method with the structure in order to 10 -andmake it that obvious in this case. 11 NOSUHOL & NOSUHOL 11 The Palmaz abstract has all but disappeared. 12 BY: ERIC I. HARRIS, ESO. 12 It was not mentioned in opening. There is maybe one 13 Counsel for Cordis Corporation slide, Mr. Snyder's demonstratives on it, and they've YOUNG, CONAWAY, STARGATT & TAYLOR 14 turned their case into simply a structure case. They BY: JOSY W. INGERSOLL, ESQ. 15 15 have now recast Claim 23 as just a structure and the 16 -and-16 structure is Ersek. 17 17 Now, I think that's a fundamental change, 18 KENYON & KENYON BY: GEORGE BADENOCH, ESO., but I can live with that. I can litigate that 19 MARK CHAPMAN, ESQ. and WALTER HANLEY, ESQ. completely different case. That's not the point of my 20 (New York, New York) comment except to put in context what they are doing as 21 Counsel for Boston Scientific Corporation 21 a result of their fundamental change in their defense 22 22 23 strategy. 23 24 Now, to develop that strategy, the first, I think the single worst thing they are doing is focusing 25 on the cancellation of Claim 13. In the opening, Mr.

Jury Trial - Volume C

19

CondenseIt<sup>™</sup>

Monday, March 21, 2005

Page 552 1 Badenoch said, and the next package in your pile is a l the jury. collection of documents, including summarics, from the 2 3 opening. 3 MR. DISKANT (Continuing): And it focuses on 4 Claim 13 is cancelled, still cancelled today, only one claim in dispute, which is wrong. and they said that Claim 23 is still okay. Why? Because They then continue that -- based on their it has a smooth surface. 6 new-found argument that this is just a structure and And this was an implicit argument. All that 7 incorporates no use and method ideas. makes Claim 23 valid is its smooth surface. There are 8 9 many, many things wrong with that argument. 9 10 First, on the facts, we cancelled Claim 23 as 10 MR. DISKANT (Continuing): And so they, in 11 the record reflects, not because we agreed with it, 11 this last set of slides I've attached, they now compare because we're in re-examination and as we said, in the 12 Claim 23 to Claim 51, which requires a stent on a 13 record, we sought patent rights that could be forced 13 balloon. Claim 23 does not do that. against infringers, so we're foregoing an appeal. 14 They compare it to Claim 1, which describes 14 15 The law is very, very, very clear on this. a method of implanting. They have a purported legal 16 instruction from their engineer about what method claims

Section 282, each claim is independently presumed valid, and even if, even if Claim 13 were invalid, which it isn't, the law is that a dependent claim shall be presumed valid, even though dependent upon an invalid claim.

20 21 The case law is to exactly the same effect. The case law is you can't do a domino-type approach 23 carving off elements and say the patent turns on any one element. The case law says a patentee is not required to fight tooth and claw over every possible

17 and device claims are. They then compare the device of 18 Claim 23 with what a method claim would look like. 19 They compare the device with and without 20 the supposed method. All of this is legal instruction 21 from a mechanical engineer that will not be repeated in 22 the charge and is not right. It focuses on only one 23 claim in issue. It focuses on the finding, the validity 24 of Claim 23 in comparison to other claims rather than on 25 its own terms. And it's particularly egregiously wrong

Page 551

Page.

thought an examiner had. These kind of battles may bear on claim interpretation and we've had lots of

arguments about that. I don't begrudge anything arguing

the file wrapper for claim interpretation, but the

cancellation of a claim, even if it were an admission

of obviousness, which it was not, or even if it was

found obvious, is not relevant to the obviousness inquiry.

8 Each claim is presumed valid and you must look at all of its limitations as a whole. And so the attempt to whittle down Claim 13 to the smooth element, and they 11 now say -- after I've complained over the weekend, they 12 now say they're not going to focus on the smooth element, 13 they're just going to point it out.

14 And, of course, it's hard to imagine what pointing it out does other than raise doubts in the jury's mind about why there's only one element that patentability supposedly depends upon. And the theory that patentability depends only on the smooth element isn't in any expert report and it is not relevant to 20 this remand trial because, of course, the definition of

21 smooth has not changed. 22 So there are a collection of slides. You know, Cordis effectively gives up Claim 13 and pursues 23 to add smooth surface, cancels Claim 13. This is just wrong-headed. It's off the reservation. It misleads

I in this remand case where, as your Honor knows, we tried

2 in the first instance a method claim as well as a

product claim. We tried Claim 44, which includes a

4 balloon. We won that on infringement. Your Honor set it

aside because it was filed for the purpose of litigation.

I hope we never get the need to get to an appeal on the

issue. That is incorrect. It has not been resolved.

8 We're trying this one claim, 23, because that's what's left at this point in time. And even if

we were not in an a remand situation, it would be simply

wrong to attempt to assess the validity of Claim 23 by

comparing it to other claims. There's only one

analysis. You take the claims and you compare them to

the prior art. And the other claims have nothing to do

15 with it and are confusing and misleading, and I think

16 highly prejudicial to my client.

17

18

19

20

25

I have, lastly, a proposed instruction for -on a number of claims, which I will hand up. It's really based on the number of witnesses charged. It basically echoes the same thoughts, which is the number of claims and the number of witnesses.

21 22 I would ask that these demonstratives be stricken and this line of questioning barred from Dr. 23 Buller. 24

THE COURT: All right. What I'm concerned

Jury Trial - Volume C

CondenseIt<sup>TM</sup>

Monday, March 21, 2005

Page 554 Page 556 1 about right now is the cross-examination of Dr. Buller MR. BADENOCH: Well, I intend to go into his so we don't hold our jury up. understanding THAT it's a structure claim. I'm not going So, Mr. Badenoch, if you would respond in to put up the Snyder slides that counsel is complaining terms of your anticipated cross, I would appreciate it. about with him, but I'm going to explain this is a We will take this up at our next break. structure claim. And then I'm going to talk about -- in MR. BADENOCH: Your Honor, yes. Thank you. 6 fact, I can go into a little bit more detail. Your Honor, The point is, of course, that this is a if we're going to discuss my outline for Dr. Buller, maybe 7 device claim. There's simply no question about that. he should step outside for just a minute. 8 It's not a method claim. It is a claim for a structure. 9 THE COURT: All right. Dr. Buller, if you 10 That's very clear. We have not changed our theory on 10 would step out for just a minute. that. 11 11 Thank you. 12 We are not going to say in these comparison 12 MR. DISKANT: Perhaps to speed this along, let slides, we are using them because we think the jury needs 13 me just be clear what I object to. Mr. Badenoch wants to 13 to be instructed on what the claim is and is not. We're 14 examine Dr. Buller about Claim 23 and isn't it a structure 15 not going to argue that it's invalid compared to other claim. They can have at it as long as they want. I don't 15 16 claims or invalid compared to Claim 13. 16 object to that. 17 THE COURT: Doesn't my claim construction 17 I object to comparing it to other claims in 18 take care of that, though? 18 the patent which implicitly suggest those comparisons 19 MR. BADENOCH: Well, your Honor, here's what 19 are relevant to any issue in this case when they are not. 20 has happened. The plaintiff, you see, has departed So that is the focus of my objection. If you 20 totally from that. They are trying the case on Dr. 21 21 are going to only examine about 23 and whether it's a --22 Palmaz's general idea, his method, his balloon that's fine. If there are other claims that could be 22 23 expandable tent, his awards. We've had a drum beat of 23 asserted or shouldn't be asserted or Claim 13 has been 24 totally emotional prejudicial things talking about how cancelled, that's not fine. I don't object to 24 25 great Dr. Palmaz's balloon expandable stent is, and how 25 questioning about what the file wrapper said about the Page 555 Page 557 great his method is. And it is critical to try this thickness. 1 2 case fairly that we point out that's not the claim in 2 MR. BADENOCH: It's my turn. suit. We have to be able to point out it's not the 3 MR. DISKANT: I understand. I just wanted claim in suit. 4 4 perhaps to move it along. The other thing, your Honor, is that there 5 MR. BADENOCH: The problem, your Honor, is are some issues, including thickness, for example, how for the jury to understand this, to show them a method 7 you measure it, where the Court did decide that that claim and say, now, this is a method claim, it's not like 8 would be a fact question. The construction did not end 8 Claim 23, that -up putting in the Federal Circuit language on measuring 9 THE COURT: If there's no dispute that Claim thickness, and we understand that. But now that makes 10 23 -- well --11 it very relevant to tell the jury what has been said 11 MR. BADENOCH: No, because what's happening, before about thickness and how you measure it, including your Honor, is they are trying the case based on the 13 what they said in the file history. unobviousness of the method, and we've got to bring that 14 When it comes to how you apply the Court's back. We won't suggest that there's any -- you know, 15 construction to the facts, we have to be able to say that there's some suspicious reason why the other claims what Cordis said before in the public record. So we do are in the case or that the jury should speculate or have to refer, at least to that extent, in the file 17 anything like that. That's what I understood the 17 18 wrapper. 18 complaint was about the opening. We won't say that, 19 On Claim 13, my understanding of the --19 If we talk about other claims with any of THE COURT: Now, this has to do with what 20 the witnesses today, it is only to make the jury 20 21 you anticipate cross-examining Dr. Buller on. That's understand that this is not a method claim, that a what you are focusing on? method claim looks like this, that this is not a 23 MR. BADENOCH: Yes, in part. balloon claim, the claim with a balloon in looks like 24 THE COURT: So tell me exactly what subjects this. And that's all we're going to do with it. And

you intend to cross-examine him on.

that, I think, is important for the jury to understand

6	there's no objection well. I'm not sure where the	6	measurements, then your expert must have reviewed the

7 objections are. I'm going to allow the cross-examination 8 to go forward but, as I've said on more than one occasion 9 now, we are not writing on a blank slate and I, quite 10 frankly, am not comfortable with using the file history 11 to try this case when the Federal Circuit has reviewed 12 the file history and -- well, and didn't enter judgment on it, and I have not entered judgment on it, and I'm not confident what relevance it has at this point. 15 MR. BADENOCH: Your Honor, can I just say one 16 thing on that? 17 THE COURT: One thing. Then we need to get 18 the jury.

file history and can point it out. We don't need a patent law expert to do that. 9 And if he did not use the file history, then 10 there's no relevance to it anyway. 11 MR. BADENOCH: The difference, of course, is 12 he's talking about the technical meaning of the subject matter, which Mr. Witherspoon can't. Mr. Witherspoon can explain where you find these things. 15 THE COURT: Well, but the expert must have 16 found it to use it. 17 MR. BADENOCH: Well, the expert can find it, 18 of course. 19 THE COURT: Yes. MR. BADENOCH: The jury is not as -- as he is 20 21 in finding their way of big volumes. 22 THE COURT: Well, page numbers are a page

number. An expert who looked at it to do his

25 he looked for his analysis.

calculations can look at it and explain to the jury where

MR. BADENOCH: Yes, I understand.

20 On the point of how you measure thickness, 21 the Federal Circuit made a comment. The Court decided

2 that was not intended to be part of the claim

23 construction mandate, so we respect that.

19

24

Cordis has argued that you can interpret how you measure thickness by reading the specification. And

Cordis v. Boston & Scimed, CA#97-550(SLR), etc.

Page 3871

Page 3869

1 for world. But for infringement we would have kept right 2 on selling \$500 million of stents a year and more in a growing market. It's a phony issue.

They showed you charts from 1998 and said, Oh, look, they only made 70,000 stents. Look at how little capacity they had. We had closed the plants. We had laid off the worse. People weren't buying our stents because they had taken our market share with infringing stents. Capacity is a phony issue.

I didn't see that 725,000 stent unit 11 documenting backup. I showed you. The small units, 386,000, shows J&J had enormous capacity to make stents. 13 I didn't hear any discussion currently. We ramped back up with BX Velocity from 4 percent, we are now at 20 percent of the market. Norman Noble can make 150,000 stents a month. Come on? What are we talking about 17 here?

I think this was my favorite moment. Mr. Colbert said, It's hard to imagine anyone ravaging Johnson & Johnson. I don't know. They did a pretty good job. And now they say, Well, all right, we killed you, so you couldn't have made enough stents. As I say, it's a phony issue.

Oh, but by the way, when you look at their 24 numbers on Radius, they say they immediately could have 1 expanded in a vessel. And it conforms to the vessel.

2 That's why we are only talking about it in the first

3 diameter. This definition of wall surface is talking

about it in the unexpanded form. Why? Because in the

expanded form, this is what it looks like. It's not in

a common cylindrical plane at that point. It can't be.

They put up Ersek. X-31889. They put up the language, but I kept waiting to see if Mr. Colbert would 8 respond to what I showed you, which is, when we are talking about the fixation sleeve and outwardly projecting edges, what are we talking about. We made it darned clear

to the Patent Office what we were talking about. We are

talking about it in the first diameter, unexpanded. How

do we know that? As is evident from the specification of

15 the patent with particular reference to Figure 1A. You folks have the patent. Go look at Figure 1A. What is it?

Unexpanded, in the first diameter. That's all 17

18 we are talking about here. Why? That's all we can talk 19 about, because once it's expanded in a vessel, it reacts

to the vessel. If the vessel has plaque - you saw the

pictures, they never addressed those pictures. Why?

They can't. Again, it's another phony issue. 22

23 They showed you measurements, references to 24 measurements, measurements taken in air. Again, Dr.

25 Snyder, why didn't he measure it in the pig vessel that

Page 3870

1 ramped up and been half the market with Radius.

One more point on Radius. He showed you the chart where suddenly it goes from 68 percent to 50/50,

what's wrong with that argument? It's very simple.

Cordis had a minimal market share, from '98 until BX Velocity came out. Why? We were competing against other

balloon expandable stents. If a doctor is going to pick

a balloon expandable stent, he had a choice. He could

use the AVE infringing stent, the ACS infringing stent

or the NIR infringing stent or the Cordis stents. Of course, we had a small market share. The question you

have to ask yourself is, take those three players out of

the market, and what do you have? You have what the 13 market looked like in 1996 and 1997. And no self-

expanding stent would have changed that reality. 15

Talk about ACS for a moment.

Can I have X-31162, please? There is no reference to the second diameter there. And I listened for an hour and ten minutes

waiting for Mr. Colbert to respond to the picture that I put up, which explains why there is no reference to the second diameter there. 22

Can I have X-31835, please?

It's because you can't have it in a common 24 cylindrical plane in the second diameter, because it is

Page 3872 1 he tested? He didn't. He measured it in air. A stent

2 doesn't - isn't designed to function in air. It

3 functions in a vessel, in a diseased vessel.

At the end of the day, the Multi-Link

5 infringes Claim 23. Literally and certainly under the doctrine of equivalents. You folks have been through

7 this exercise before, this is a much, much easier exercise.

8 No issues about welds. No issues about use protruding.

9 Walk through the claim and you will see all the elements 10 are there. Both literally and under the doctrine of

11 equivalents. Function, way and result are all the same

12 with respect to the ACS Multi-Link when you look at the

13 claim elements of Claim 23.

14

Cost. There was a reference to, you know, we 15 had the data, you know, they didn't. Folks, we have 16 produced millions and millions of pages of documents. If Dr. Bell could have figured out how to make his cost issue

18 make sense, he had the data to do it. The problem is, as I have said at the 19 20 beginning, we have a factory. We make lots of things at 21 that factory. We make balloons. We make catheters. We 22 make guidewires. We make stents. Dr. Bell has 23 arbitrarily said, Well, I can divine how much of the 24 air-conditioning, how much of plant overhead, should be

25 ascribed to each of those products. We don't do it that

```
Page 3877
           MR. CAVANAUGH (Continuing): People can't come
2
   into the market and infringe, take sales away from the
3
   companies, propose lowball royalty rates and get away with
   it. That's why the law requires that infringers pay the
6
   full amount of damages.
           I want to thank you again for your time.
7
           One of my colleagues just handed me a note
8
   that said I made a mistake.
9
           In calculating the reasonable royalty, you
10
   look at Boston's average selling price of $1,710. That's
11
12 how we get to our $115 million, because the royalty is
   based on their selling price, which was substantially
13
14 higher than ours.
           I want to thank you again for your time.
15
16 It's been - as I said at the outset, it's been a long
   process and all of us are very thankful four your
17
   attention and your diligence and your service. Have a
   good weekend.
19
           THE COURT: The question is, I have about 30
20
   pages - 39 pages of instructions, not as long as the
   original batch, but still some. Would you like a break
22
   before I read them?
            All right. Why don't we hand them out, so you
25
   can follow along.
```

You have two main circles as jurors. The first 3 one is to decide what the facts are from the evidence that you saw and heard here in court. Deciding what the facts are you is your job, not mine, and nothing that I have said or done during this trial was meant to influence your decision about the facts in any way. Your second duty is to take the law that I 9 10 give you, apply it to the facts, and decide the amount of damages Cordis is entitled to by a preponderance of the 12 evidence. It is my job to instruct you about the law, and you are bound by the oath that you took at the 14 beginning of the trial to follow the instructions that I give you, even if you personally disagree with them. 16 This includes the instructions that I gave you before and during the trial, and these instructions. All the instructions are important, and you should consider them together as a whole. 19 Perform these duties fairly. Do not let any 20 bias, sympathy or prejudice that you may feel toward one side or the other influence your decision in any way. You must make your decision based only on the 23 evidence that you saw and heard here in court. Do not

Please listen very execully to everything I

Page 3880

Page 3878 Oh. We don't have the new ones yet? All right. 1 2 THE COURT: If she is not back in a minute, we 3 will take a short break. (Deputy Court Clerk returned and distributed 5 the instructions). 6 MR. COLBERT: Thank you. 7 MR. CAVANAUGH: Thank you, Betty. 8 THE COURT: All right. Are we all set? 9 Members of the jury, I will now instruct you 10 about the law that you must follow in reaching your verdict on the damages phase of the case. 12 As I did before your earlier deliberations, I 13 will start by explaining your duties and the general rules that apply in every civil case, and then I will explain some rules that you must use in evaluating particular testimony and evidence. The reason I am repeating these rules is that they are very important. 18 Then I will explain the positions of the 19 20 parties and the law you will apply in the damages phase of the case. 21 And last, as I have before, I will explain 22

any way. The evidence in this case includes only what 3 the witnesses said while they were testifying under oath and the exhibits that I allowed into evidence. Nothing else is evidence. The lawyers' statements and arguments are not evidence. Their questions and objections are not evidence. My legal rulings are not evidence. My comments and questions are not evidence. During the trial, I may have not let you hear 10 11 the answers to some of the questions that the lawyers asked. I also may have ruled that you could not see some of the exhibits that the lawyers wanted you to see. You 14 must completely ignore all of those things. Do not even think about them. Do not speculate about what a witness might have said or what an exhibit might have shown. These things are not evidence, and you are bound by your oath not to let them influence your decision in any way. 18 Make your decision based only on the evidence, 19 as I have defined it here, and nothing else. 20 21 You should use your common sense in weighing the evidence. Consider it in light of your every-day 22 23 experience with people and events, and give it whatever weight you believe it deserves. If your experience tells 24 you that certain evidence reasonably leads to a conclusion,

let rumors, suspicions or anything else that you may have

1 seen or heard outside of court influence your decision in

return.

23 the rules that you must follow during your deliberations

24 in the jury room, and the possible verdicts that you may

1 Wall stent do not infringe Claim 23 of the '762 patent. 2 The parties also agree that the Cook GR 1 and GR 2 stents and the Medtronic Wiktor stents were licensed by Cordis and that they were lawfully on the market as of the date that they became licensed.

However, Cordis and Boston Scientific disagree as to whether those stents would have been acceptable substitutes for the patented products. Boston Scientific contends that they would have been acceptable substitutes, while Cordis contends that they would not have been. In reaching your conclusion on this issue, you must apply the standard for what constitutes an acceptable substitute that I just told you about.

Both Cordis and Boston Scientific agree that the stents made by ACS are substitutes for the patented products. The parties agree that the ACS stents are noninfringing substitutes to the patented products after April 3, 2000, because Cordis and ACS on that date entered into a settlement agreement, which included a grant of a license to ACS under the '762 patent.

Cordis and Boston Scientific differ as to whether the ACS stents should be considered as noninfringing substitutes prior to April 3, 2000. Cordis contends that the ACS stents are not noninfringing substitutes prior to that date because Cordis contends

Page 3891 1 parties that these stents infringe Claim 23 of the '762

patent, and, therefore, are not noninfringing substitutes. During the course of the trial, you may have heard about various settlement agreements between Cordis

and other parties, which may have licensed one or more of the patents at issue in the liability phase of the trial.

Settlement agreements are not evidence regarding the value of a patent, the validity of a patent, or infringement of a patent. Parties settle lawsuits for various business reasons that may have nothing to do with respective views of the worth of any patent claim. Therefore, you should not consider the fact that a party 12 entered into a settlement agreement as evidence that it 13 infringed a patent, or that it agreed that it infringed 14

the patent, or even that it believed it infringed a patent. You must decide the issue of infringement for yourselves.

As I said before, to establish its entitlement to lost profits based on lost sales, one of the things that Cordis must prove is that there was demand for the patented products attributable to the claimed features of that product. Demand for the patented products can be proven by significant sales of Cordis' products or by significant sales of Boston Scientific's products.

As I indicated before, Cordis is only entitled

Page 3890

that they infringed Claim 23 of the '762 patent prior to that date. Boston Scientific contends that the ACS

stents are noninfringing substitutes because Boston

Scientific contends that they have never infringed the

'762 patent - and that should be infringed Claim 23 of the '762 patent. 6

Cordis has the burden of proving that the ACS stents should not count as noninfringing substitutes prior to April 3, 2000 by a preponderance of the evidence.

You must, therefore, determine whether ACS's 11 stents infringe Claim 23 of the '762 patent. In making this determination, you should apply the instructions 13 regarding infringement and the meaning of patent claims 14 in dispute contained on Pages 21 through 40 of the set of jury instructions applicable to the earlier phase of the trial. 16

If you find that the ACS stents infringe 18 Claim 23 of the '762 patent, then the ACS stents were not a noninfringing substitute until April 3, 2000. If you find that the ACS stents do not infringe Claim 23 of the '762 patent, then the ACS stents were noninfringing substitutes from the date ACS entered the United States market, October 3, 1997. 23

Further, AVE markets the MicroStent, GFX 1, 24 GFX 2, and S series stents. It is agreed between the

Page 3892

to lost profits for sales it would have made but for the

2 infringement. Accordingly, to be entitled to its lost

profits based on additional sales that it claims it would 3

have made, Cordis must prove that it would have had the

ability to manufacture or otherwise obtain its product

to make those additional sales, as well as the marketing

capability to make those additional sales.

It is not necessary for Cordis to prove that Cordis and Boston Scientific were the only two suppliers in the market in order for Cordis to demonstrate 10 entitlement to lost profits for some of Boston Scientific's sales. If the realities of the marketplace are such that noninfringing substitutes were available from suppliers who would have made only some, but not all, of the sales that were made by Boston Scientific, then Cordis may be entitled to lost profits on a percentage of the infringing 17 sales.

The burden is on Cordis, however, to show to a reasonable probability that it would have sold that percentage if the NIR stents had never existed. By the same token, even if you find that Cordis and Boston Scientific would have been the only two suppliers of products having the advantages of the patented product, it does not necessarily mean that Cordis would have made all of Boston Scientific's sales. The burden is on Cordis

CondcuscIt™ Wednesday, December 13, 2000 Jury Trial - Volume N Page 3332 Page 3330 1 Q. Now, when the cardiologist selects the stent, how 1 to achieve this anchoring MR BRENEISEN: Could we just highlight the 2 does he select the length of the stent? wall surface having a substantially uniform thickness? 3 A. Well, you have to make sure you cover the whole And also a thin-walled tubular member? 4 lesion or the whole narrowing. So if you have a length of 5 the vessel this long and you want to repair that and put a BY MR. BRENEISEN: Q. Do you, in your opinion, find there is an 6 stent in, you wouldn't pick a stent that is exactly as equivalent - let me start over. How, in your opinion, 7 long as the narrowing because, if you misplace the stent did the ACS stents compare to the portion of Claim 13 8 by even a fraction of a millimeter, you will have a little 9 bit of that material hanging over the edge of the stent, which calls for a thin-walled tubular member having first and second ends and a wall surface to the wall surface which is a result you wouldn't want. having a substantially uniform thickness? So you always need to pick a stent that is a 11 A. In both cases, in the expanded state they don't 12 little bit longer than the lesion, than the narrowing you exist in the ACS stent were repairing. 14 Q. So with a Multi-Link, would there always be Q. And is there any equivalent in the ACS stent to what is set forth in Claim 13? 15 projecting edges that could imbed that are going beyond A. No. Because the ACS stent is trying to get 16 the lesion area? something that is not thin-walled and not of uniform 17 A. Right. Regardless of what you think the material 18 on the inside would do to the behavior of the stent, you thickness. 19 MR. BRENEISEN: I have nothing further, your 19 always have more healthy tissue at either end that you're 20 anchoring into. 20 Honor. THE COURT: All right. I think it's time for 21 Q. Okay. One last subject. I'd like to now talk for 21 22 a moment about the doctrine of equivalents in Claims 13 22 our morning break, so before we start cross-examination, and 23. Do you have an understanding of the doctrine of let's take 15 minutes. 24 (Short recess taken.) 24 equivalents? 25 A. Generally, yes. Page 3331 Page 3333 1 Q. Could you explain to the jury your understanding? 2 A. Well, the way I understand it is for something to 2 (Court resumed after the recess.) 3 be, one product to be equivalent to a description in a 3 4 patent that the accused product has to basically do the 4 THE COURT: Anything before we bring the jury 5 same thing, do it in basically the same way and get 5 in? 6 MR. DISKANT: No, your Honor. 6 essentially the same result in order to be considered THE COURT: We'll stop at 1:00, come back at equivalent 8 Q. So how does the ACS Multi-Link compare from a 1:30 and go to 3:30. 9 (At this point the jury entered the courtroom doctrine of equivalents perspective to Claim 13? 10 A. Well, I think it works in a very different way. So and took their seats in the box.) 10 11 it shouldn't be considered equivalent. THE COURT: Mr. Diskant. 11 12 O. What is the different way? Could you explain that, 12 MR. DISKANT: Thank you, your Honor. 13 CROSS-EXAMINATION 13 please? 14 A. The design intent of the Palmaz and the Palmaz BY MR. DISKANT: 15 patent is for the device to keep this common cylindrical, Q. Good morning, Dr. Snyder. A. Good morning. 16 this very low profile in both states. In the unexpanded 16 MR. DISKANT: Can we have the picture on the 17 17 state to help with insertion and then the expanded state 18 to keep the profile of the stent low in the vessel. The 18 BY MR. DISKANT: 19 design intent in the ACS stent is to intentionally flare

24 A. It's using the same thing. It's using twisting of

I BUTSUBY, DESCRIPCE 1, 2000

Page 2744

1 in the wall surface of a tubular member as by the removal 2 of material.

Smooth surface. The outside of a wall surface of the unexpanded tubular member has a continuously even surface without roughness, points, bumps or ridges, especially to the touch.

Terms found in the asserted claims of the '332 8 patent:

Segment. A piece or separate fragment of 9 10 something, one of the constituent parts into which a body 11 is or may be divided.

12 Generally tubular shape. The phrase segment 13 having a generally tubular shape is broader in scope than 14 the phrase tubular member and may encompass segments that 15 are not perfectly hollow, elongated or cylindrical in 16 shape...

Plurality of openings. More than one opening. That is more than one breach or aperture. 18

Openings forming a series of alternating open 20 and closed portions. All openings have open and closed 21 portions. The closed portions comprising the materials the material that gives form to or encloses the openings. It serves to block or shut off entry or passage in some 24 fashion.

The claim requires that the openings in the

Page 2746 1 respect to which a body or figure or system of points is

2 either radially or bilaterally symmetrical.

The phrase modifies the word segment. The 4 phrase is written in the case that the entire segment.

not a portion thereof, must be capable of angular

displacement with respect to the longitudinal axis of the adjacent segment, not a portion thereof. In light of

the specification which speaks only in terms of the

connector being disposed to flexibly connect, rather than

in terms of flexible segments, the Court concludes that the limitation requires relatively rigid segments and

relatively flexible connectors.

Terms found in the asserted claims of the '312 and '370 patents.

Undulating. Rising and falling in waves. thus having at least a crest and a trough.

17 Longitudinals and longitudinal structures. Structures that extend or run lengthwise in the direction of the stent's longitudinal axis. Although there is no requirement that the longitudinals or longitudinal structures extend the entire length of the stent, the structures have to extend long enough to be considered

continuous across a number of points of support. 24 Closed perimeter sells. A relatively small

area on the perimeter of the stent that is bounded on all

Page 2745

1 segment alternate around the circumference so that each 2 end of a segment consists of alternating open and closed 3 portions.

4 The Court construes the phrase at issue to 5 mean a combination of openings, some of which are opened, 6 that is without a closing material at the end of the 7 segment, thus permitting ingress and egress and some of 8 which are closed, that is having a closing material at the end of the segment, thus blocking the shutting off entry of passage.

Connector. Discrete structure disposed or particularly arranged between adjacent tubular members in order to join them together. The language of the claim, that is comprising a connector, does not require that the claim be limited to a single connector.

. Whereby each of the segments may be displaced at an angle with respect to the longitudinal axis of an adjacent segment, when the stent is delivered through a curved portion of the access or coronary arteries.

Displaced means to remove from the usual 21 proper place, to put out of place.

And angle is a figure formed by two lines diverging from the same point or by two services diverging from the same point.

Axis is defined as a straight line with

sides by continuous metal.

The word closed means to block or shut off entry or passage,

The word perimeter means the boundary of a closed plane figure, outer limits.

Zig-zag segments. A portion of the stent that has one or more short sharp turns or angles.

Stent or stent structure. A device used to support, expand or hold open an artery or other body passageway.

A patent owner may enforce his right to exclude others from making, using or selling the patented invention by filing a lawsuit for patent infringement. A company accused or threatened with an accusation of patent infringement may bring a lawsuit against the patent holder for deciaratory judgment that it does not infringe the patents and that the patents are invalid.

18 Here, Boston Scientific brought such a suit for declaratory judgment, asserting that the NIR stent did not infringe the '762 patent, and that this patent is invalid. Cordis has sued Boston Scientific and has alleged that the NIR stent infringes Claims 23 and 24 of the '762 patent, Claim 22 of the '332 patent, Claim 24 21 of the '312 patent, and Claims 25 and 26 of the '370 25 patent,

Cordis v. Boston, et al., CA No. 97-550 (SLR), etc.

20

21

Cordis is asserting that Boston Scientific directly infringed all of the asserted claims except Claim 44 of the '762 patent.

10 There are two ways in which a patent claim 11 may be directly infringed. First, a claim may be 12 literally infringed. Second, a claim may be infringed 13 under what is called the doctrine of equivalents. With 14 respect to Claim 44, Cordis does not claim that Boston 15 Scientific itself directly infringes the claim but, rather, alleges that Boston Scientific is liable for contributory 17 infringement.

Boston Scientific denies all of Cordis' 19 infringement allegations.

The preambles to all the asserted claims use 21 the transitional phrase comprising. Comprising is 22 interpreted the same as including or containing. In 23 patent claims, comprising means that the claims are open-24 ended. As such, the claim is not limited to only what is in the claim based on its explanation. If you find

applicable.

2 Application of the reverse doctrine of equivalents is the exception, not the rule, and is limited to those situations where a defendant's product is so far changed in principle that, although it performs the same or a similar function to produce substantially the same result as that defined by a patent claim, it does so in a substantially different way. 8

9 If you find noninfringement under the reverse 10 doctrine of equivalents then you should not consider infringement under the doctrine of equivalents.

12 If you do not find literal infringement, you 13 may consider infringement under the doctrine of equivalents. Under the doctrine of equivalents, you may find that the NIR stent infringes an asserted patent claim if, for each element of the claim that is not literally present, the NIR stent contains an equivalent

of that element. This instruction applies only to the claims of the '762 and '332 patents.

20 Cordis is not contending that the NIR stent infringes the '312 or '370 patents under the doctrine of equivalents. Application of the doctrine of equivalents is the exception, however, not the rule. Patent claims must be clear enough so that the public has fair notice of what was patented.

Page 2749

I that the NIR stent includes each element in an asserted 2 claim, the fact that it may also include an additional

3 element is irrelevant. The presence of additional

elements in the NIR stent does not mean that the NIR

stent does not infringe an asserted claim.

For the NIR stent to literally infringe any 7 of the asserted patent claims, the subject matter of the patent claim must be found in the NIR stent. In other words, any of the asserted patent claims is literally infringed if the NIR stent includes each and every element in the asserted patent claim. If the NIR stent omits any single element decided in a given patent, Boston Scientific does not literally infringe that claim. You must determine literal infringement with respect to each asserted claim individually. Please remember the question is whether the NIR stent infringes any asserted claims of the patents and not whether the NIR stent is similar to a product made by Cordis. Accordingly, you must be certain to compare the NIR stent with the claim it is alleged to infringe and not with any product made by Cordis.

If you have found that any of the asserted claims is literally infringed, you may nonetheless consider whether the MIR stent is so far changed in principle from the literal words of the claim that a doctrine called the reverse doctrine of equivalents is Page 2751

Notice permits other parties to avoid actions 2 which infringe the patent and to design around the patent.

3 On the other hand, the patent owner should not be deprived

of the benefits of his patent by competitors who

appropriate an invention while avoiding the literal

language of the patent claims. The test to determine

equivalents under the doctrine of equivalents is whether

the differences between the claim element, which you have

found not to be literally present, and the element present

in the NIR stent are insubstantial. If you find that the

claim element and the element of the NIR stent have only

insubstantial differences, then you will have determined

that the element in the NIR stent is equivalent to the

claimed element.

15

19

20

21

On the other hand, if you find that the claim element and the element in the NIR stent have substantial differences, then you will have determined that the element in the NIR stent is not equal, then, to the claimed element.

In determining whether the differences are substantial or insubstantial, you may also consider whether or not the claimed element and the element in the NIR stent perform substantially the same function in substantially the same way to produce substantially the same result. Keep in mind that the doctrine of equivalents Jury Trial ~ Volume J

Page 2752

cannot be applied so as to effectively climinate a claim requirement in its entirety.

The question of whether there is a substantial or insubstantial difference between the element found in the NIR stent and the claimed element is to be determined as of the time of the alleged infringement rather than at the time the patent application was filed or the patent issued

You have heard evidence that Boston Scientific 10 has obtained patents on stents. In connection with that evidence, I instruct you that the grant of a patent only gives the patent owner the right to exclude others from making, using or selling the invention. It does not give the patent owner the right to make, use or sell an 15 invention.

For that reason, the device that is covered 16 17 by a subsequent patent may still infringe an earlier patent. Nonetheless, in considering the issue of 19 infringement under the doctrine of equivalents, you may consider that Boston Scientific obtained the patent, 20 21 which may be some evidence that the differences between the NIR stent and the asserted claim elements are substantial. Such evidence should be considered along with other evidence, other similarities and differences 24 between the asserted claim elements and the NIR stent.

THE COURT (Continging): A person may directly

infringe a patent without knowledge that what he is doing is an infringement of the patent. He may also directly

infringe, even though in good faith he believed that what

he is doing is not an infringement of any patent,

Scientific has indirectly infringed Claim 44.

Cordis alleges that Boston Scientific has directly infringed all of the asserted patents, but for Claim 44 of the '762 patent. Cordis alleges that Boston

11 Cordis does not contend that Boston Scientific 12 directly infringes Claim 44 of the '762 patent. Instead. 13 Cordis contends that Boston Scientific indirectly 14 infringes that claim by contributory infringement.

15 Contributory infringement of a claim that 16 describes a process is established where one offers for sale a device which may be and ordinarily issues and is 18 sold with the intention of being used in the manner 19 described in the claim. That is the patent holder must 20 establish that a device was sold and used in carrying 21 out a process described in the claim of the patent, and 22 that the seller knew the product was especially made for 23 that purpose and not a staple article suitable for a substantial noninfringing use. 24

Thus, Cordis must prove by a preponderance of

Page 2753

25

. You may find that the NIR stent represents an 2 improvement over the invention defined in the asserted patent claims and even that it may have obtained patents on these improvements. However, you are not to presume 5 that these facts mean that Boston scientific could not 6 have infringed the asserted patent claims. As long as the NIR stent includes all of the elements of an asserted 8 claim, either literally or by equivalence then that asserted claim is infringed by the NIR stent despite Boston Scientific's improvements.

THE COURT (Continuing): On the other hand, the fact that Boston Scientific has obtained patents on 13 these improvements may be considered in determining whether or not the NIR stent is substantially different 16 from the asserted claims.

Boston scientific would be liable for directly 18 infringing an asserted patent in this case if you find that Cordis has proven by a preponderance of the evidence that Boston Scientific has sold or offered for sale the invention defined in at least one of the asserted claims of that patent.

Page 2755

I the evidence each of the following to establish 2 contributory infringement of Claim 44, which covers a 3 method of medical treatment:

One, that Boston Scientific sold or supplied 5 the NIR stent.

Two, that the NIR stent is not a staple article of commerce capable of substantial noninfringing

9 Three, that Boston Scientific sold or supplied the NIR stent with knowledge that the NIR stent was especially made for use in the manner claimed in Claim 44 in the '762 patent or that the NIR stent is actually used 13 in a manner that directly infringes the claim.

14 And, four, that every step of the method of medical treatment described in Claim 44 is performed either by a single entity or by different persons or 17 entities who have some connection to each other.

18 In determining whether the NIR stent is a staple article of commerce, you should focus on the NIR 19 stent actually supplied by Boston Scientific and you should take into account the quality, quantity and 22 efficiency of the suggested uses. That a product is 23 known to have potential infringing uses is not sufficient to establish contributory infringement. You should also

consider in this regard the uses for which the NIR stent
